The Origin Of Cosmic Rays:

The Origin of Cosmic Rays V. L. Ginzburg, S. I. Syrovatskii, 2013-10-22 The Origin of Cosmic Rays examines the astrophysical phenomena that cause cosmic rays The title details the concerns in the study of tracing the sources of cosmic rays The text presents the primary cosmic rays on earth and then proceeds to tackling the cosmic magnetic bremsstrahlung radio emission and cosmic rays in the universe Next the selection deals with the motion of cosmic rays in the interstellar medium and the origin of cosmic rays The text also talks about the quantitative galactic theory of the origin of cosmic rays The book will be of great use to astronomers astrophysicists and scientists who studies phenomena that involves celestial bodies

Origin of Cosmic Rays G. Setti, G. Spada, A.W. Wolfendale, 2012-12-06 The cosmic radiation was discovered by Hess in 1912 but its origin is still the subject of much controversy and considerable study For several decades most workers in the cosmic ray field were interested in the Nuclear Physical aspect of the particle beam and many important discoveries were made notably the identification of the positron the muon the pion and the strange particles More recently however emphasis has changed to the Astrophysical aspect both with regard to the origin of the radiation and to its relation with the other radiation fields Mindful of the increasing importance of the Astrophysical facets of the subject the Cosmic Ray Commission of IUPAP approached the High Energy Astrophysics Commission of the IAU with the suggestion of a joint Symposium on Cosmic Ray Origin The plan was to bring together workers in all the various astronomical fields from Radio through Optical to Gamma Rays with Cosmic Ray physicists and to fully explore the various interrelations The approach was received with enthusiasm and this book contains the proceedings of the ensuing Symposium styled IUPAP IAU Symposium No 94 which was held in Bologna from 11th 14th June 1980 Virtually all the papers presented are reproduced here The Scientific Organizing Committee chose the invited speakers whose papers formed the major scientific component of the meeting Additional short contributed papers were also called for and very brief 2 page resumes which have not been refereed are given in the proceedings

Symposium No 94 which was held in Bologna from 11th 14th June 1980 Virtually all the papers presented are reproduced here The Scientific Organizing Committee chose the invited speakers whose papers formed the major scientific component of the meeting Additional short contributed papers were also called for and very brief 2 page resumes which have not been refereed are given in the proceedings *The Origin of Cosmic Rays*, 2008 Cosmic Rays reach the Earth from space with energies of up to more than 1020 eV carrying information on the most powerful particle accelerators that Nature has been able to assemble Understanding where and how cosmic rays originate has required almost one century of investigations and although the last word is not written yet recent observations and theory seem now to fit together to provide us with a global picture of the origin of cosmic rays of unprecedented clarity Here we will describe what we learned from recent observations of astrophysical sources such as supernova remnants and active galaxies and we will illustrate what these observations tell us about the physics of particle acceleration and transport We will also discuss the end of the Galactic cosmic ray spectrum which bridges out attention towards the so called ultra high energy cosmic rays UHECRs At 1020 eV the gyration scale of cosmic rays in cosmic magnetic fields becomes large enough to allow us to point back to their sources thereby allowing us to perform cosmic ray astronomy as confirmed by the recent results obtained with the Pierre Auger Observatory We will discuss the implications of these observations for the understanding of UHECRs as well as some questions which will likely remain unanswered and will be the target of the next generation of cosmic ray experiments *Composition and Origin of Cosmic Rays* M.M. came to an end we had agreed that the compilation of a more extensive collection of personal reminiscences would be an interesting and worthwhile undertaking Accordingly the next day we held an editorial meeting to draw up a list of potential authors and two of us the present editors started work on the project In putting the book together our intention has been to try to capture and record through these personal accounts something of the atmosphere the excitement and the frustrations of research in cosmic rays as experienced at first hand by some of the practitioners in the field It has never been our intention that it should comprise a systematic history of the subject Neither unfortunately can it be a fully representative collection since practical limits to the size of the volume alone would preclude that

Cosmic Rays at Earth P.K.F. Grieder, 2001-07-27 In 1912 Victor Franz Hess made the revolutionary discovery that ionizing radiation is incident upon the Earth from outer space He showed with ground based and balloon borne detectors that the intensity of the radiation did not change significantly between day and night Consequently the sun could not be regarded as the sources of this radiation and the question of its origin remained unanswered Today almost one hundred

years later the question of the origin of the cosmic radiation still remains a mystery Hess discovery has given an enormous impetus to large areas of science in particular to physics and has played a major role in the formation of our current understanding of universal evolution For example the development of new fields of research such as elementary particle physics modern astrophysics and cosmology are direct consequences of this discovery Over the years the field of cosmic ray research has evolved in various directions Firstly the field of particle physics that was initiated by the discovery of many so called elementary particles in the cosmic radiation There is a strong trend from the accelerator physics community to reenter the field of cosmic ray physics now under the name of astroparticle physics Secondly an important branch of cosmic ray physics that has rapidly evolved in conjunction with space exploration concerns the low energy portion of the cosmic ray spectrum Thirdly the branch of research that is concerned with the origin acceleration and propagation of the cosmic radiation represents a great challenge for astrophysics astronomy and cosmology Presently very popular fields of research have rapidly evolved such as high energy gamma ray and neutrino astronomy In addition high energy neutrino astronomy may soon initiate as a likely spin off neutrino tomography of the Earth and thus open a unique new branch of geophysical research of the interior of the Earth Finally of considerable interest are the biological and medical aspects of the cosmic radiation because of its ionizing character and the inevitable irradiation to which we are exposed This book is a reference manual for researchers and students of cosmic ray physics and associated fields and phenomena It is not intended to be a tutorial However the book contains an adequate amount of background materials that its content should be useful to a broad community of scientists and professionals The present book contains chiefly a data collection in compact form that covers the cosmic radiation in the vicinity of the Earth in the Earth's atmosphere at sea level and underground Included are predominantly experimental but also theoretical data In addition the book contains related data definitions and important relations The aim of this book is to offer the reader in a single volume a readily available comprehensive set of data that will save him the need of frequent time consuming literature searches
