**Musical Imaginations** David Hargreaves, Dorothy Miell, Raymond MacDonald, 2012 Musical imagination and creativity

are amongst the most abstract and complex aspects of musical behaviour though until recently they have been difficult to subject to empirical enquiry. However music psychology and some allied disciplines have now developed both theoretically and methodologically to the point where some of these topics are now firmly within our grasp. The study of creativity and imagination is growing rapidly in disciplines including psychology, sociology, neuroscience and education. The inter and multidisciplinary study of music and developments in music psychology in particular mean that studies of musical imagination and creativity in action are now distinctly possible.

*Musical Imaginations* is a wide ranging multidisciplinary review of the latest theory and research on musical creativity, performance and perception by some of the most eminent scholars in their respective disciplines. The topics addressed in this book include the investigation of creativity and imagination in music and emotion, composition and improvisation, performance and performance traditions, listening strategies, different musical genres and cultural belief systems, social collaboration, identity formation and the development of psychologically based strategies and interventions for the enhancement of performing musicians. With creativity now a topic of significant interest, this book will be valuable to all those in the fields of psychology, sociology, neuroscience, education as well as to musicians themselves dealing with practical as well as theoretical issues in music therapy, performance and education. The study of creativity and imagination is growing rapidly in disciplines including psychology, sociology, neuroscience and education. The inter and multidisciplinary study of music and developments in music psychology in particular mean that studies of musical imagination and creativity in action are now distinctly possible. This book undertakes a multidisciplinary review of these developments. It contains a wide range of contributions by some of the most eminent scholars in their respective disciplines representing a comprehensive account of the state of the art of theory and research on musical creativity, performance and perception.

*Reconstruction, Replication and Re-enactment in the Humanities and Social Sciences* Sven Dupré, Anna Harris, Julia Kursell, Patricia Lulof, Maartje Stols-Witlox, 2025-10-01. Performative methods are playing an increasingly prominent role in research into historical production processes, materials, bodily knowledge and sensory skills and in forms of education and public engagement in classrooms and museums. This book offers for the first time sustained interdisciplinary reflections on performative methods variously known as Reconstruction, Replication and Re-enactment (RRR) practices across the fields of history of science, archaeology, art history, conservation, musicology and anthropology. Each of these fields has distinct histories, approaches, tools and research questions. Researchers in the historical disciplines have used reconstructions to learn about the materials and practices of the past while anthropologists and ethnographers have more often studied the re-enactments themselves, participating in these performances as engaged observers. In this book authors bring their experiences of RRR practices within their discipline into conversation with RRR practices in other disciplines, providing a basis for interdisciplinary cross-fertilization.
