MacDowell, 1912 *The Complete Technology Book on Expanded Plastics, Polyurethane, Polyamide and Polyester Fibres*
NIIR Board of Consultants and Engineers, 2006-10-01 Expanded plastics are also known as foamed plastics or cellular plastics
Expanded plastics can be flexible semi flexible semi rigid or rigid They can also be thermoplastic or thermosetting and can
exist as open celled or closed celled materials Expanded plastics may be prepared from most synthetic and many natural
polymers Most of the industrially important ones are made from polystyrene polyvinyl chloride polyurethanes and
polyethylene as well as from resins that derive from phenol epoxy etc Polyurethane PUR and PU is polymer composed of a
chain of organic units joined by carbamate urethane links Polyurethane polymers are formed by combining two bi or higher
functional monomers One contains two or more isocyanate functional groups and the other contains two or more hydroxyl
groups More complicated monomers are also used The Polyurethanes are among the most recent additions to the many
commercially important classes of polymers Urethanes can be considered esters of the unstable carbamids acid or amide
esters of carbonic acid A polyamide is a polymer containing monomers of amides joined by peptide bonds They can occur
both naturally and artificially examples being proteins such as wool and silk and can be made artificially through step growth
polymerization or solid phase synthesis Polyamides are commonly used in textiles automobiles carpet and sportswear due to
their extreme durability and strength Polyester is a category of polymers which contain the ester functional group in their
main chain Natural polyesters and a few synthetic ones are biodegradable but most synthetic polyesters are not Polyester
fibres are produced by the melt spinning process Raw materials are heated to a spinning mass which is then pressed through
spinnerets Manufacturing techniques are now developed to the point where they can produce fibres adapted to suit the
widest possible applications they can have round oval or angular profiles making them firm to the touch Applications of these
polymers are in various fields like rubber industry textile industry chemical industries etc Some of the fundamentals of the
book are epoxy curing system background process conditions polyether polyols with epoxy resins highlights of the
technological achievement laminates comprising a hard foam layer and a fiber reinforced synthetic resin layer highlights of
the technological achievement process conditions plastic deformation modification of amino polyols with epoxy resins
