## Some Topics In Probability And Analysis:

Some Topics in Probability and Analysis R. F. Gundy, 1989      **Some Topics in Probability and Analysis** Richard F. Gundy, 1989 This book is based on lectures presented by the author at DePaul University in July 1986 The lectures cover three main topics The first is local time theory for Brownian motion and some geometrical inequalities for harmonic functions in the upper half plane  $\mathbb{R}^n_+$  The author sketches a proof of the inequalities obtained by Barlow and Yor for the maximal local time functional The second topic concerns a probabilistic treatment of Riesz transforms in  $\mathbb{R}^n_+$  and semimartingale inequalities The author proves semimartingale inequalities of the type usually obtained for martingales The      Grants and Awards for the Fiscal Year Ended ... National Science Foundation (U.S.), 1981      **Catalogue for the Academic Year** Naval Postgraduate School (U.S.), 1970      Topics in Optimal Transportation Cédric Villani, 2021-08-25 This is the first comprehensive introduction to the theory of mass transportation with its many and sometimes unexpected applications In a novel approach to the subject the book both surveys the topic and includes a chapter of problems making it a particularly useful graduate textbook In 1781 Gaspard Monge defined the problem of optimal transportation or the transferring of mass with the least possible amount of work with applications to engineering in mind In 1942 Leonid Kantorovich applied the newborn machinery of linear programming to Monge's problem with applications to economics in mind In 1987 Yann Brenier used optimal transportation to prove a new projection theorem on the set of measure preserving maps with applications to fluid mechanics in mind Each of these contributions marked the beginning of a whole mathematical theory with many unexpected ramifications Nowadays the Monge Kantorovich problem is used and studied by researchers from extremely diverse horizons including probability theory functional analysis isoperimetry partial differential equations and even meteorology Originating from a graduate course the present volume is intended for graduate students and researchers covering both theory and applications Readers are only assumed to be familiar with the basics of measure theory and functional analysis      Grants and Awards for Fiscal Year... National Science Foundation (U.S.), 1977      **Linguistics across Disciplinary Borders** Steven Coats, Veronika Laippala, 2024-01-11 This volume highlights the ways in which recent developments in corpus linguistics and natural language processing can engage with topics across language studies humanities and social science disciplines New approaches have emerged in recent years that blur disciplinary boundaries facilitated by factors such as the application of computational methods access to large data sets and the sharing of code as well as continual advances in technologies related to data storage retrieval and processing The march of data denotes an area at the border region of linguistics humanities and social science disciplines but also the inevitable development of the underlying technologies that drive analysis in these subject areas Organized into 3 sections the chapters are connected by the underlying thread of linguistic corpora how they can be created how they can shed light on varieties or registers and how their metadata can be utilized to better understand the internal structure of similar resources While some chapters in the

volume make use of well established existing corpora others analyze data from platforms such as YouTube Twitter or Reddit The volume provides insight into the diversity of methods approaches and corpora that inform our understanding of the border regions between the realms of data science language linguistics and social or cultural studies     **Mathematics**

**Information in International Law** José M. Reis, 2024-10-16 Examining state behavior this book sheds light on the often overlooked role of information production and diffusion in international law and relations Most theories of public international law and state behavior rely on a certain degree of international law related information such as an international legal ruling being made public and diffused to reach various key actors such as third states or domestic actors However while assumptions about information being produced and diffused permeate international legal scholarly work these assumptions have not been systematically and empirically evaluated Based on an empirical analysis the author challenges prevailing assumptions by systematically evaluating the accessibility and dissemination of crucial international law related information such as treaty negotiation documents or legal rulings Using a variety of quantitative case studies on key stages of international lawmaking and covering various issue areas from human rights to trade law each chapter traverses three critical levels of analysis namely whether international law information is public and transparent whether the information is salient and reaches the general public and how the information is framed by the media and political elites The book will appeal to students researchers and scholars of law political science and economics as well as policy makers interested in a better understanding of information production and diffusion in international law and the impact of public opinion on compliance with international law     **The Art and Science of Analyzing Software Data** Christian Bird, Tim
