Some Bitter Taste:

Mechanisms of Taste Transduction Sidney A. Simon, Stephen D. Roper, 2014-07-22 Mechanisms of Taste Transduction introduces a number of topics essential to a complete understanding of taste. These topics range from the control of food intake to the biophysical mechanisms of transduction and the design of food flavors in the food industry. The responses and organization of special sensory pathways are described in regard to the *Bitterness* Michel Aliani, Michael N. A. Eskin, 2017-03-14 The increasing demand for healthy foods has resulted in the food industry developing functional foods with health promoting and or disease preventing properties. However many of these products bring new challenges. While drugs are taken for their efficacy functional foods need to have tastes that are acceptable to consumers. Bitterness associated with the functional foods is one of the major challenges encountered by food industry today and will remain so in years to come. This important book offers a thorough understanding of bitterness the food ingredients that cause it and its accurate measurement. The authors provide a thorough review of bitterness that includes an understanding of the genetics of bitterness perception and the molecular basis for individual differences in bitterness perception. This is followed by a detailed review of the chemical structure of bitter compounds in foods where bitterness may be considered to be a positive or negative attribute. To better understand bitterness in foods separation and analytical techniques used to identify and characterize bitter compounds are also covered. Food processing can itself generate compounds that are bitter such as the Maillard reaction and lipid oxidation related products. Since bitterness is considered a negative attribute in many foods the methods being used to remove and mask it are also thoroughly discussed. *Tasting and Smelling* Gary K. Beauchamp, Linda Bartoshuk, 1997-09-05 Tasting and Smelling presents a comprehensive overview to research on these two important modes of perception. The book offers a review of research findings on the biophysics, neurophysiology and psychophysics of both senses as well as discussing the emotional component associated with taste and smell and clinical disorders affecting each of these two senses. Tasting and Smelling answers how odors and flavors are perceived why we have favorites and what happens when our senses go awry. This book is of interest to the researcher in perception, cognition or neurophysiology. *The Science of Flavor* Dr. Stuart Farrimond, 2025-08-26 They say you eat with the eyes. But we now know that smell, texture, temperature, color and even atmosphere down to the background music influence how we perceive flavor. As anyone who has lost their sense of taste will know, flavorless food is dull and monochrome. It is flavor that brings food into full technicolor life. Yet it's not always easy to make something tasty. The secrets to flavor can baffle chefs and scientists alike. Food science expert Dr. Stuart Farrimond explores major flavor categories such as salt, acid and heat from chilies and how they interact and profiles all the major foods from individual fruit, veg, herbs and spices to the building blocks such as rice and wheat that give us staples like bread, pasta and noodles. With pairing notes for every ingredient you'll soon be inventing new recipes.
