The Dirichlet Problem With L2 Boundary Data For Elliptic Linear Equations:

The Dirichlet Problem with L2-Boundary Data for Elliptic Linear Equations Jan Chabrowski, 2006-11-14 The Dirichlet problem has a very long history in mathematics and its importance in partial differential equations harmonic analysis potential theory and the applied sciences is well known In the last decade the Dirichlet problem with L2 boundary data has attracted the attention of several mathematicians The significant features of this recent research are the use of weighted Sobolev spaces existence results for elliptic equations under very weak regularity assumptions on coefficients energy estimates involving L2 norm of a boundary data and the construction of a space larger than the usual Sobolev space $W^{1,2}$ such that every L2 function on the boundary of a given set is the trace of a suitable element of this space The book gives a concise account of main aspects of these recent developments and is intended for researchers and graduate students Some basic knowledge of Sobolev spaces and measure theory is required *Nonlinear Potential Theory of Degenerate Elliptic Equations* Juha Heinonen, Tero Kipela, Olli Martio, 2018-05-16 A self contained treatment appropriate for advanced undergraduates and graduate students this text offers a detailed development of the necessary background for its survey of the nonlinear potential theory of superharmonic functions 1993 edition **Similarity Problems and Completely Bounded Maps** Gilles Pisier, 2013-11-11 These notes revolve around three similarity problems appearing in three different contexts but all dealing with the space $B(H)$ of all bounded operators on a complex Hilbert space H The first one deals with group representations the second one with C^* algebras and the third one with the disc algebra We describe them in detail in the introduction which follows This volume is devoted to the background necessary to understand these three open problems to the solutions that are known in some special cases and to numerous related concepts results counterexamples or extensions which their investigation has generated For instance we are naturally lead to study various Banach spaces formed by the matrix coefficients of group representations Furthermore we discuss the closely connected Schur multipliers and Grothendieck's striking characterization of those which act boundedly on $B(H)$ While the three problems seem different it is possible to place them in a common framework using the key concept of complete boundedness which we present in detail In some sense completely bounded maps can also be viewed as spaces of coefficients of C^* algebraic representations if we allow $B(H)$ valued coefficients this is the content of the fundamental factorization property of these maps which plays a central role in this volume Using this notion the three problems can all be formulated as asking whether boundedness implies complete boundedness for linear maps satisfying certain additional algebraic identities [Proceedings of the Conference on Differential & Difference Equations and Applications](#) Ravi P. Agarwal, Kanishka Perera, 2006 **The Development of the Number Field Sieve** Arjen K. Lenstra, H. W. Lenstra, 1993-08-30 The number field sieve is an algorithm for finding the prime factors of large integers It depends on algebraic number theory Proposed by John Pollard in 1988 the method was used in 1990 to factor the ninth Fermat number a 155 digit integer The algorithm is most suited to numbers of a special form but

there is a promising variant that applies in general This volume contains six research papers that describe the operation of the number field sieve from both theoretical and practical perspectives Pollard's original manuscript is included In addition there is an annotated bibliography of directly related literature

Coding Theory and Algebraic Geometry Henning Stichtenoth, Michael A. Tsfasman, 2006-11-15 About ten years ago V D Goppa found a surprising connection between the theory of algebraic curves over a finite field and error correcting codes The aim of the meeting Algebraic Geometry and Coding Theory was to give a survey on the present state of research in this field and related topics The proceedings contain research papers on several aspects of the theory among them Codes constructed from special curves and from higher dimensional varieties Decoding of algebraic geometric codes Trace codes Exponential sums Fast multiplication in finite fields Asymptotic number of points on algebraic curves Sphere packings

H-Control Theory Edoardo Mosca, Luciano Pandolfi, 2006-11-14 The fundamental problem in control engineering is to provide robust performance to uncertain plants H control theory began in the early eighties as an attempt to lay down rigorous foundations on the classical robust control requirements It now turns out that H control theory is at the crossroads of several important directions of research space or polynomial approach to control and classical interpolation theory harmonic analysis and operator theory minimax LQ stochastic control and integral equations The book presents the underlying fundamental ideas problems and advances through the pen of leading contributors to the field for graduate students and researchers in both engineering and mathematics

Systems Engineering Frequency Domain Design and Nonlinear System H Kwakernaak The Polynomial Approach to H Optimal Regulation J B Pearson A Short Course in l Optimal Control Existence Families, Functional Calculi and Evolution Equations Ralph DeLaubenfels, 2006-11-15 This book presents an operator theoretic approach to ill posed evolution equations It presents the basic theory and the more surprising examples of generalizations of strongly continuous semigroups known as existent families and regularized semigroups These families of operators may be used either to produce all initial data for which a solution in the original space exists or to construct a maximal subspace on which the problem is well posed Regularized semigroups are also used to construct functional or operational calculi for unbounded operators The book takes an intuitive and constructive approach by emphasizing the interaction between functional calculus constructions and evolution equations One thinks of a semigroup generated by A as e^{tA} and thinks of a regularized semigroup generated by A as $e^{tA} g(A)$ producing solutions of the abstract Cauchy problem for initial data in the image of $g(A)$ Material that is scattered throughout numerous papers is brought together and presented in a fresh organized way together with a great deal of new material *Lie Algebras and Lie Groups* Jean-Pierre Serre, 2009-02-07 This book reproduces J P Serre s 1964 Harvard lectures The aim is to introduce the reader to the Lie dictionary Lie algebras and Lie groups Special features of the presentation are its emphasis on formal groups in the Lie group part and the use of analytic manifolds on p -adic fields Some knowledge of algebra and calculus is required of the reader but the text is easily accessible to graduate students and to mathematicians at large
