## **The Healthy Adolescent A Parents Manual:**

**The Healthy Adolescent** Barry Lauton, Arthur S. Freese, 1981      Handbook of Adolescent Health Psychology William T. O'Donohue, Lorraine T. Benuto, Lauren Woodward Tolle, 2014-07-08 Adolescence is a pivotal period of development with respect to health and illness. It is during adolescence that many positive health behaviors are consolidated and important health risk behaviors are first evident; thus, adolescence is a logical time period for primary prevention. In addition, the predominant causes of morbidity and mortality in adolescence are quite different from those of adults, indicating that early identification and treatment of adolescent health problems must be directed to a unique set of targets in this age group. Moreover, because of the particular developmental issues that characterize adolescence, intervention efforts designed for adults are often inappropriate or ineffective in an adolescent population. Even when chronic illnesses are congenital or begin in childhood, the manner in which the transition from childhood to adolescence to young adulthood is negotiated has important implications for disease outcomes throughout the remainder of the person's life span. Organized in five major sections: General Issues, Developmental Issues, Treatment and Training, Mental Health, and Physical Health, and 44 chapters, Handbook of Adolescent Health Psychology addresses the common and not so common health issues that tend to affect adolescents. Coverage includes: Context and perspectives in adolescent health psychology; Health literacy, health maintenance, and disease prevention in adolescence; Physical disorders such as asthma, obesity, physical injury, and chronic pain; Psychological disorders such as substance abuse, attention deficit hyperactivity disorder, depression, and eating disorders; Congenital chronic diseases such as type 1 diabetes and spina bifida. Handbook of Adolescent Health Psychology is the definitive reference for pediatricians, family physicians, health psychologists, clinical social workers, rehabilitation specialists, and all practitioners and researchers working with adolescents.

**Handbook of Evidence-Based Treatment Manuals for Children and Adolescents** Craig Winston LeCroy, 2008-04-18 With the advance of evidence-based practice has come the publication of numerous dense volumes reviewing the theoretical and empirical components of child and adolescent treatment. There are also a variety of detailed treatment manuals that describe the step-by-step procedures to guide ongoing research and practice. The second edition of Craig Winston LeCroy's Handbook of Evidence-Based Child and Adolescent Treatment Manuals is a forceful combination of the two approaches as he gathers fifteen varied treatment manuals and brief summaries of the research supporting each to ensure that practitioners will truly understand how to implement the treatments they are using. A completely revised and expanded edition of the handbook's first edition, this is an essential guide to some of the best programs for helping children and teens. Each chapter begins with an explanatory section that discusses the theoretical and empirical underpinnings of the programs. The treatment manual follows, leading readers through sessions with specific details about conducting the treatment that have been refined and improved through extensive testing and research. Organized into three sections: the major clinical disorders, social problems confronting children and teens, and

preventive interventions the Handbook brings together some of the most esteemed researcher practitioners in the child and adolescent field The book presents an impressive variety of innovative treatment programs and techniques including the SiHLE program intended to prevent problems confronting children and teens and preventive interventions the Handbook brings together some of the most esteemed researcher practitioners in the child and adolescent field The book presents an impressive variety of innovative treatment programs and techniques including the SiHLE program intended to prevent HIV through education and self esteem building the Children of Divorce Intervention Program a therapy for younger children stressing resilience and skill building and Strengths Oriented Family Therapy which reaches out to substance involved adolescents and their families The Handbook of Evidence Based Child and Adolescent Treatment Manuals is an indispensable reference for researchers graduate students and practitioners working with children and adolescents in a multitude of settings from schools and juvenile correction centers to group homes and family service agencies
