Nardin, Davide Natalini, Adalbert F. X. Wilhelm, 2019-11-09 This open access book brings together a set of original studies that use cutting edge computational methods to investigate conflict at various geographic scales and degrees of intensity and violence Methodologically this book covers a variety of computational approaches from text mining and machine learning to agent based modelling and social network analysis Empirical cases range from migration policy framing in North America and street protests in Iran to violence against civilians in Congo and food riots world wide Supplementary materials in the book include a comprehensive list of the datasets on conflict and dissent as well as resources to online repositories where the annotated code and data of individual chapters can be found and where agent based models can be re produced and altered These materials are a valuable resource for those wishing to retrace and learn from the analyses described in this volume and adapt and apply them to their own research interests By bringing together novel research through an international team of scholars from a range of disciplines Computational Conflict Research pioneers and maps this emerging field The book will appeal to students scholars and anyone interested in the prospects of using computational social sciences to advance our understanding of conflict dynamics *The Science of Synthesis* Debora Hammond, 2011-05-18 Debora Hammond s *The Science of Synthesis* explores the development of general systems theory and the individuals who gathered together around that idea to form the Society for General Systems Research In examining the life and work of the SGSR s five founding members Ludwig von Bertalanffy Kenneth Boulding Ralph Gerard James Grier Miller and Anatol Rapoport Hammond traces the emergence of systems ideas across a broad range of disciplines in the mid twentieth century Both metaphor and framework the systems concept as articulated by its earliest proponents highlights relationship and interconnectedness among the biological ecological social psychological and technological dimensions of our increasingly complex lives Seeking to transcend the reductionism and mechanism of classical science which they saw as limited by its focus on the discrete component parts of reality the general systems community hoped to complement this analytic approach with a more holistic orientation As one of many systems traditions the general systems group was specifically interested in fostering collaboration and integration among different disciplinary perspectives with an emphasis on nurturing more participatory and truly democratic forms of social organization *The Science of Synthesis*
