Social Security and Retirement around the World Jonathan Gruber, David A. Wise, 2008-04-15 What accounts for the striking decline in labor force participation at increasingly younger ages Social Security and Retirement around the World examines one explanation social security programs actually provide incentives for early retirement This volume houses a set of remarkable papers that present information on the social security systems and labor force participation patterns in Belgium Canada France Germany Italy Japan the Netherlands Spain Sweden the United Kingdom and the United States

Social Security Programs and Retirement around the World Axel Börsch-Supan, Courtney C. Coile, 2025-03-04 A global analysis of the effects of social security reforms on the retirement incentives and labor force trends of older workers Employment among older men and women has increased dramatically in recent years reversing a downward trend in the closing decades of the twentieth century Social Security Programs and Retirement around the World examines how changing retirement incentives have reshaped labor force participation trends among older workers The chapters feature country specific analyses for Belgium Canada Denmark France Germany Italy Japan Netherlands Spain Sweden the United Kingdom and the United States They find that while there is significant heterogeneity across countries the reforms of recent decades have generally reduced the implicit tax on work at older ages These changes correlate positively with labor force participation The studies exploit the variation in the timing and extent of reforms of retirement incentives and employ microeconomic methods to investigate whether this correlation reflects a causal relationship Policy changes appear to have contributed to rising labor force activity but other factors like the role of women in the labor force improved health and changes in private pensions likely also play important roles

Social Security Programs and Retirement Around the World David A. Wise, 2016-01-13 Research has shown that disability insurance programs can play a large role in the departure of older persons from the labor force as many workers pass through disability insurance on their path from employment to retirement But what is the real effect that disability insurance programs have on labor force participation in different countries David A Wise authoritatively tackles this question This volume's research encompasses the globe traveling from Belgium to Canada to Japan and the United States and covers the provisions of disability insurance programs as well as other pathways to retirement in over twelve countries From publisher description

Social Security Programs and Retirement around the World Jonathan Gruber, David A. Wise, 2010-04-15 Many countries have social security systems that are currently financially unsustainable Economists and policy makers have long studied this problem and identified two key causes First as declining birth rates raise the share of older persons in the population the ratio of retirees to benefits paying employees increases Second as falling mortality rates increase lifespans retirees receive benefits for longer than in the past Further exacerbating the situation the provisions of social security programs often provide strong incentives to leave the labor force Social Security Programs and Retirement around the World offers comparative analysis from twelve countries and

examines the issue of age in the labor force A notable group of contributors analyzes the relationship between incentives to retire and the proportion of older persons in the workforce the effects that reforming social security would have on the employment rates of older workers and how extending labor force participation will affect program costs Dispelling the myth that employing older workers takes jobs away from the young this timely volume challenges a raft of existing assumptions about the relationship between old and young people in the workforce Social Security Programs and Retirement around the World Courtney C. Coile, Kevin Milligan, David A. Wise, 2020-01-10 In developed countries men's labor force participation at older ages has increased in recent years reversing a decades long pattern of decline Participation rates for older women have also been rising What explains these patterns and the differences in them across countries The answers to these questions are pivotal as countries face fiscal and retirement security challenges posed by longer life spans This eighth phase of the International Social Security project which compares the social security and retirement experiences of twelve developed countries documents trends in participation and employment and explores reasons for the rising participation rates of older workers The chapters use a common template for analysis which facilitates comparison of results across countries Using within country natural experiments and cross country comparisons the researchers study the impact of improving health and education changes in the occupation mix the retirement incentives of social security programs and the emergence of women in the workplace on labor markets The findings suggest that social security reforms and other factors such as the movement of women into the labor force have played an important role in labor force participation trends

Overtime Lisa F. Berkman, Beth C. Truesdale, 2022 Overtime questions the conventional thinking that living longer means working longer offering incisive new evidence for what the future of the American workforce will truly look like

Social Security Programs and Retirement around the World Jonathan Gruber, David A. Wise, 2009-02-15 The future of Social Security is troubled both in the United States and in most other developed countries with aging populations As improvements in health care and changes in life styles enable retirees to live longer than ever before the stress on national budgets will increase substantially In *Social Security Programs and Retirement around the World* Jonathan Gruber David A. Wise and experts in many countries examine the consequences of reforming retirement benefits in a dozen nations Drawing on the work of an international group of noted economists the editors argue that social security programs provide strong incentives for workers to leave the labor force by retiring and taking the benefits to which they are entitled By penalizing work social security systems magnify the increased financial burden caused by aging populations thus contributing to the insolvency of the system This book is a model of comparative analysis that evaluates the effects of illustrative policies for countries facing the impending rapid growth of social security benefits Its insights will help inform one of the most pressing debates *Social Security Pension Reform in Europe* Martin Feldstein, Horst Siebert, 2009-02-15 Social Security in the United States and in Europe is at a critical juncture Through the essays assembled in *Social Security Pension Reform in*

Europe Martin Feldstein and Horst Siebert along with a number of distinguished contributors discuss the challenges facing Social Security reform in the aging societies of Europe A remarkable range of European nations Germany France Finland the Netherlands Poland Romania Italy Sweden the United Kingdom and Hungary have implemented or are about to implement mixed Social Security systems that combine a traditional defined benefit of the pay as you go system with an individual retirement account defined contribution of a capital funded system The essays here highlight the problems that the European pension reform process faces and how it differs from that of the United States This timely volume will significantly enrich the debate on pension reform worldwide
