Architecture and the Social Sciences Maria Manuela Mendes, Teresa Sá, João Cabral, 2017-04-05 This book contributes to current debates on the relationship between architecture

and the social sciences highlighting current interdisciplinary and transdisciplinary teaching as well as research and practice in architecture and urbanism It also raises awareness about the complementarities and tensions between the spaces of the project including the construction spaces and living space It gives voice to recent projects and socio territorial interventions focusing on interdisciplinary and multidisciplinary approaches between society and space Divided into two parts the first part discusses the possible dialogue between social sciences and architecture while the second part explores architecture politics and social change in urban territories from a European perspective

The Contribution of Social Sciences to Sustainable Development at Universities Walter Leal Filho, Michaela Zint, 2016-01-06 This volume is the first of its kind to present contemporary state of the art examples of how social science theories models and findings can advance all aspects of campus sustainability an area that has so far been largely neglected The individual chapters reflect the broad diversity of research on sustainable campus development conducted within and across basic and applied social science disciplines drawing on a range of methods and case studies from around the world Institutions of higher education have been among the leading promoters of sustainable development However efforts to transition to sustainability have been largely dominated by technological solutions and universities and colleges are increasingly recognizing that this transition cannot be achieved without attention to the human dimension Administrators campus sustainability officers and other university staff faculty members and students as well as alumni and external constituents all help to shape which sustainability innovations and initiatives are considered and pursued and their participation determines the ultimate success of sustainability efforts The book s individual contributions illustrate how the social sciences can broaden visions of what may be possible identify the advantages and disadvantages of different instrumental and emancipator approaches evaluate interventions effectiveness and offer processes for learning from mistakes and successes in ways that support continuous advances toward sustainability Given that the majority of social science research stems from universities the level of trust in these institutions and their mission to develop societal leaders higher education institutions are ideally suited for testing assessing and modeling the social innovations needed to achieve sustainability on campuses and beyond

Mudacumura,Desta Mebratu,M. Shamsul Haque,2017-09-25 Sustainable Development Policy and Administration provides a learning resource describing the major issues that are critical to understanding the multiple dimensions of sustainable development The overall theme of each contributed chapter in this book is the urgent need to promote global sustainability while adding insights into the challenges facing the current and future generations This volume brings together diverse contributions that cover the multiple facets of development resulting in a rich reference for students development managers and others interested in this emerging field Systems Science and Cybernetics - Volume II Francisco

Parra-Luna,2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section

deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations. Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory, the design of ad hoc strategies and methodologies, the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches, cross disciplinary integration and suitable methods for broaching psychological, cultural and socio political dynamisms. The third section is devoted to cybernetics in the present dual meaning of the term: on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed. Known as second order cybernetics, this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty, complexity and diversity. Finally, the fourth section centres around artificial and computational intelligence, addressing sub themes such as neural networks, the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence.

Reviewing **Social Sciences And Planning For Sustainable Development**: Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence. Its capacity to evoke emotions, stimulate contemplation, and stimulate metamorphosis is truly astonishing.
