examines today's environmental controversies within a socio-organizational context. After outlining the contours of pragmatic environmentalism, Carolan considers the pressures that exist where ecology and society collide, such as population growth and its associated increased demands for food and energy. He also investigates how various ecological issues, such as climate change, are affecting our very own personal health. Finally, he drills into the social structural dynamics, including political economy and the international legal system, that create ongoing momentum for environmental ills. This interdisciplinary text features a three-part structure in each chapter that covers fast facts about the issue at hand, examines its wide-ranging implications, and offers balanced consideration of possible real-world solutions. New to this edition are Movement Matters boxes, which showcase grassroots movements that have affected legislation. Discussion questions and key terms enhance the text's usefulness, making *Society and the Environment* the perfect learning tool for courses on environmental sociology.

Environment and Society Charles Harper, 2015-08-26 This book discusses human connections and impacts on the environment and vice versa and examines suggestions for changing the human-environment relationship to a more sustainable environment. The threats arising out of these pressures result in human security challenges. This book analyses the formation and promotion of societal security within the context of the Arctic Barents Region. It applies the human security framework, which has increasingly gained currency at the UN level since 1994, as a tool to provide answers to many questions that face the Barents population today. The study explores human security dimensions such as environmental security, economic security, health, food, water, energy, communities, political security, and digital security in order to assess the current challenges that the Barents population experiences today or may encounter in the future. In doing so, the book develops a comprehensive analysis of vulnerabilities, challenges, and needs in the Barents Region and provides recommendations for new strategies to tackle insecurity and improve the wellbeing of both indigenous and local communities. This book will be a valuable tool for academics, policy makers, and students interested in environmental and human security, sustainable development, environmental studies, and the Arctic and Barents Region in particular. *Linking Science and Technology to Society's Environmental Goals* Policy Division, Policy and Global Affairs, National Research Council, 1996-12-05 Where should the United States focus its long-term efforts to improve the nation's environment? What are the nation's most important environmental issues? What role should science and technology play in addressing these issues? *Linking Science and*

Technology to Society's Environmental Goals provides the current thinking and answers to these questions. Based on input from a range of experts and interested individuals including representatives of industry, government, academia, environmental organizations, and Native American communities, this book urges policymakers to:

- Use social science and risk assessment to guide decisionmaking.
- Monitor environmental changes in a more thorough, consistent, and coordinated manner.
- Reduce the adverse impact of chemicals on the environment.
- Move away from the use of fossil fuels.
- Adopt an environmental approach to engineering that reduces the use of natural resources.
- Substantially increase our understanding of the relationship between population and consumption.

This book will be of special interest to policymakers in government and industry, environmental scientists, engineers, and advocates, and faculty, students, and researchers.
