Society and Its Environment Egbert Tellegen, Maarten Wolsink, 2014-01-02 First Published in 1998 People cannot live without changing nature They do so by breathing feeding and defecating by dressing and heating and by creating barriers against wind and water cold and heat These forms of human induced change of nature have been present since the dawn of mankind People are constantly confronted by a malignant nature against which they have to defend themselves and whose resources they have to use in order to survive However the relationship between man and nature has dramatically changed during the past centuries More than the word nature the term environment has become strongly associated with damage and decay caused by human beings Hence in practice environment is mostly associated with problems In this book the term environment does not describe different environments and the way they are changed by human activities in general but focuses on those human induced of it What are the causes of these changes when and where are these changes considered as environmental problems and how do people react to these changes are the main questions of this book One of the possible reactions to environmental problems is the efforts to solve them The ways in which individual citizens private enterprises public authorities environmental organizations and others try to solve environmental problems is a main topic of this book

contributed to the lessening of those constraints Section 2 draws on data derived from surveys and interviews conducted in multiple cities and times it examines the dominant regulatory enforcement styles of local environmental protection bureaus and how these styles vary across different regions and over time Section 3 examines how various stakeholders the general public environmental groups government entities and corporations affect the environmental governance process Overall the book presents a cautiously optimistic view on the evolution of environmental governance in China While highlighting many political institutional social and economic constraints it also documents many changes that have taken place including reform efforts from within the government administrative system increasingly societal concerns and actions and changing attitudes among corporate executives potentially paving the way for more effective environmental governance in the future
