This volume investigates the nature of grammatical representations in speakers who master multiple languages Since the early days of modern formal approaches to grammar most work has been based on the language of monolingual humans Less work has been conducted based on data from speakers who possess more than one language Although important insights have been gained from a monolingual focus there is every reason to believe that bi and multilingual data can inform linguistic theory A lot of ongoing work demonstrates that this is indeed the case and the current volume contributes to this growing literature Thus the research topic addresses a number of questions relating to grammatical structures in multilingual speakers as well as the methodological issues that arise in the context of studying such speakers A better understanding of the grammatical sides of multilingualism is crucial for understanding the human language capacity and in turn for offering better advice to the public concerning issues of language choice for multilingual children and adults education and language deficits in multilingual individuals *The Law Reports. The Law Journal Reports Henry D. Barton, 1859 **The Problem of Time** Edward Anderson, 2017-09-18 This book is a treatise on time and on background independence in physics It first considers how time is conceived of in each accepted paradigm of physics Newtonian special relativity quantum mechanics QM and general relativity GR Substantial differences are moreover uncovered between what is meant by time in QM and in GR These differences jointly source the Problem of Time Nine interlinked facets which arise upon attempting concurrent treatment of the QM and GR paradigms as is required in particular for a background independent theory of quantum gravity A sizeable proportion of current quantum gravity programs e g geometrodynamical and loop quantum gravity approaches to quantum GR quantum cosmology supergravity and M theory are background independent in this sense This book s foundational topic is thus furthermore of practical relevance in the ongoing development of quantum gravity programs This book shows moreover that eight of the nine facets of the Problem of Time already occur upon entertaining background independence in classical rather than quantum physics

By this development and interpreting shape theory as modelling background independence this book further establishes background independence as a field of study Background independent mechanics as well as minisuperspace spatially homogeneous models of GR and perturbations thereabout are used to illustrate these points As hitherto formulated the different facets of the Problem of Time greatly interfere with each others attempted resolutions This book explains how none the less a local resolution of the Problem of Time can be arrived at after various reconceptualizations of the facets and reformulations of their mathematical implementation Self contained appendices on mathematical methods for basic and foundational quantum gravity are included Finally this book outlines how supergravity is refreshingly different from GR as a realization of background independence and what background independence entails at the topological level and beyond
