

CHAPTER

3

Social Science Theories and Their Implications to Education

Intended Learning Outcome:

At the end of the Chapter, the students must be able to explain three social science theories and their implications to education.

Introduction

Sociologists today employ three primary theoretical perspectives: the functionalist perspective, the conflict perspective and the symbolic interactionist perspective. These perspectives offer sociologists theoretical paradigms for explaining how society influences people, and how people influence society. Each perspective uniquely conceptualizes society, social forces, and human behavior.

Social Implications Of Biological Education:

Social Implications of Biological Education, 1977 **Social Implications of Biological Education** Arnold Brams Grobman, 1970 Scientific Process and Social Issues in Biology Education Garland E. Allen, Jeffrey J.W. Baker, 2016-09-23

This book complements fact drive textbooks in introductory biology courses or courses in biology and society by focusing on several important points

- 1 Biology as a process of doing science emphasizing how we know what we know
- 2 It stresses the role of science as a social as well as intellectual process one that is always embedded in its time and place in history

In dealing with the issue of science as a process the book introduces students to the elements of inductive and deductive logic hypothesis formulation and testing the design of experiments and the interpretation of data An appendix presents the basics of statistical analysis for students with no background in statistical reasoning and manipulation Reasoning processes are always illustrated with specific examples from both the past eighteenth and nineteenth century as well as the present

In dealing with science and social issues this book introduces students to historical sociological and philosophical issues such as Thomas Kuhn s concept of paradigms and paradigm shifts the social constructions view of the history of science as well as political and ethical issues such human experimentation the eugenics movement and compulsory sterilization and religious arguments against stem cell research and the teaching of evolution in schools

In addition to specific examples illustrating one point or another about the process of biology or social political context a number of in depth case studies are used to show how scientific investigations are originated designed carried out in particular social cultural contexts Among those included are Migration of monarch butterflies John Snow s investigations on the cause of cholera Louis Pasteur s controversy over spontaneous generation the mass extinction of the dinosaurs and the Tuskegee syphilis experiment

Multiple Representations in Biological Education David F. Treagust, Chi-Yan Tsui, 2013-02-01

This new publication in the Models and Modeling in Science Education series synthesizes a wealth of international research on using multiple representations in biology education and aims for a coherent framework in using them to improve higher order learning

Addressing a major gap in the literature the volume proposes a theoretical model for advancing biology educators notions of how multiple external representations MERs such as analogies metaphors and visualizations can best be harnessed for improving teaching and learning in biology at all pedagogical levels

The content tackles the conceptual and linguistic difficulties of learning biology at each level macro micro sub micro and symbolic illustrating how MERs can be used in teaching across these levels and in various combinations as well as in differing contexts and topic areas

The strategies outlined will help students reasoning and problem solving skills enhance their ability to construct mental models and internal representations and ultimately will assist in increasing public understanding of biology related issues a key goal in today s world of pressing concerns over societal problems about food environment energy and health

The book concludes by highlighting important aspects of research in biological education in the post genomic information age

Critical Thinking in Biology and Environmental Education

Blanca Puig, María Pilar Jiménez-Aleixandre, 2022-02-28 This volume seeks to broaden current ideas about the role of critical thinking CT in biology and environmental education considering educational challenges in the post truth era The chapters are distributed into three sections perspectives of a theoretical character part I empirical research about CT in the context of biology and health education part II and empirical research on CT in the context of environmental and sustainability education part III The volume includes studies reporting students engagement in the practice of critical thinking and displays how CT can be integrated in biology and environmental education and why biology and environmental issues are privileged contexts for the development of CT The chapters examine a range of dimensions of CT such as skills dispositions emotions agency open mindedness or personal epistemologies In addition they explore topics such as climate change sustainable diets genetically modified food vaccination acceptance of evolution homeopathy and gene cloning Concluding remarks regarding the connections between the chapters and future directions for the integration of critical thinking in biology and environmental education are presented in a final chapter
