

Postural Symptom-Complex

is a distinct clinical entity

THE CAUSE

Primary Phase — One particular type of foot imbalance, inward roll of the foot and leg, produces a series of related anatomical distortions, such progress from below upwards and combine to produce changing tensions which may be transmitted in varying degrees and location to the entire central nervous system.

Secondary Phase — After a varied time lapse, long continued dysfunction due to angulation, torsion and inequality of weight bearing, may produce inflammation (non-infectious) of: 1. Nerve (Neuritis) 2. Arteries and Veins (Arteritis and Phlebitis) 3. Muscle (Myositis) 4. Fascia (Fibrositis) 5. Ligaments (Periarthritis) 6. Joint (Arthritis).

THE SYMPTOMS

Primary Phase — General Tension produces generalized fatigue. Local Tension produces nerve root response at single or multiple levels—with variable pressures producing different reactions.

IN THIS PHASE (Nerve tension only), CHANGE FROM UPRIGHT TO RECUMBENT POSITION BRINGS PROMPT RELIEF.

Secondary Phase — To the varied symptoms of nerve tension are added those of secondary (acquired) inflammation.

IN THIS PHASE, CHANGE IN POSITION MAY OR MAY NOT BRING RELIEF (always delayed).

THE TREATMENT

Primary Phase — Fixed correction (continuously maintained) breaks inward roll of the foot and leg, breaks the cycle of nerve tension and its direct symptoms.

Secondary Phase — Aligned therapy (of non-instrument type) should be added to correction to speed recovery.
