Naumann, D.J. Lacrimal Gland, Tear Film, and Dry Eye Syndromes 2 David A. Sullivan, Darlene A. Dartt, Michele A. Meneray, 2012-12-06 During the past two decades a significant international research effort has been directed toward understanding the composition and regulation of the precorneal tear film. This effort has been motivated by the recognition that the tear film plays an essential role in maintaining corneal and conjunctival integrity, protecting against microbial challenge and preserving visual acuity. In addition, research has been stimulated by the knowledge that alteration or deficiency of the tear film, which occurs in countless individuals throughout the world, may lead to desiccation of the ocular surface, ulceration and perforation of the cornea, an increased incidence of infectious disease and potentially pronounced visual disability and blindness. To promote further progress in this field of vision research, the Second International Conference on the Lacrimal Gland, Tear Film, and Dry Eye Syndromes: Basic Science and Clinical Relevance was held at the Southampton Princess Resort in Bermuda, November 16-19, 1996. This conference was organized and directed by David A. Sullivan, PhD, codirected by Darlene A. Dartt, PhD, and Michele A. Meneray, PhD, and sponsored by the Schepens Eye Research Institute, Boston, MA, an affiliate of Harvard Medical School. The meeting was designed to assess critically the current knowledge and state of the art research on the structure and function of lacrimal tissue, tears, and the ocular surface in both health and disease.

Ocular Therapeutics and Drug Delivery Indra K. Reddy, 1995-12-12 Since ocular

therapeutics and drug delivery is a subject of interest to specialists from various disciplines such as chemical biochemical medical pharmaceutical and toxicological it truly presents a unique situation requiring a multi disciplinary approach in understanding and addressing various problems Yet we see that scientists associated with these areas are working by and large independently of one another thus limiting dissemination of knowledge experience and ideas that would greatly enhance the overall progress in this area of research Regrettably the information currently available in ocular therapeutics and drug delivery though extensive is still fragmented into various disciplines making meaningful synthesis difficult Several books are available that cover one or two aspects of the multi disciplinary fields on an individual basis however none is available that covers all of them The chapters contained in this book are specific to various interrelated areas of ocular therapeutics and drug delivery and are written by acknowledged experts from both academia and industry The book itself is divided into five parts namely I overview basic principles and methodology II pathopharmacology and clinical applications III chemical biochemical approaches to ocular drug delivery IV formulation and drug delivery considerations and V industrial and regulatory considerations Individual chapters in each section apart from presenting a concise text entail an extensive listing of references
