The Polyol Paradigm And Complications Of Diabetes:

The Polyol Paradigm and Complications of Diabetes Margo P. Cohen, 2012-12-06 In the last decade it has become increasingly evident that the clinical and morphologic changes underlying many of the complications of diabetes including cataract formation retinopathy nephropathy neuropathy and macrovascular disease are preceded by a variety of disturbances of biochemical and physiologic origin Dr Cohen has recently written a superb monograph entitled *Diabetes and Protein Glycosylation Measurement and Biologic Relevance* in which she thoroughly explores how enhanced nonenzymatic glycosylation in uncontrolled diabetes underscores the pressing need for maintenance of long term euglycemia In the present volume *The Polyol Paradigm and Complications of Diabetes* she reviews in a most succinct and thorough manner how another biochemical mechanism involving the polyol pathway is involved in the pathogenesis of such diabetes complications as retinopathy neuropathy nephropathy and cataract formation Dr Cohen gives us a clearly written and comprehensive monograph reviewing the chemistry of the polyol pathway and of the aldose reductase inhibitors and the pathophysiologic significance of increased polyol pathway activity in a variety of tissues affected by VIII Foreword diabetes mellitus She insightfully describes the relationship of increased polyol pathway activity to altered metabolism of inositol containing phospholipids and to changes in various tissue concentrations of myo inositol Finally she provides us with a careful review of the existing experimental and clinical studies with a variety of different aldose reductase inhibitors that have been and are being performed in the hope of preventing or reversing long term complications of diabetes

Scanes, 2012-12-02

Development Maturation and Senescence of Neuroendocrine Systems A Comparative Approach discusses the various phases of the aging continuum of neuroendocrine systems This book explores the fundamental and physiological component of animals which is an essential contributor to senescence Organized into three parts encompassing 21 chapters this volume starts with a discussion of the concept of neurosecretory neuron that was introduced by Ernst Scharrer in 1928 This book discusses the challenges in the study of the development of the neuroendocrine system in insects with a focus on Lepidoptera Other chapters consider the neuroendocrine mechanisms that control the physiological processes in crustaceans The reader is then introduced to the major neurohemal structures in crustaceans including the sinus gland the pericardial organs and the post commissural organs The final chapter discusses the two brain systems that show impact of endogenous steroids that account for subsets of senescent changes This book is a valuable resource for neurobiologists molecular biologists and immunologists
