The Ex Situ Conservation of Plant Genetic Resources J.G. Hawkes, Nigel Maxted, B.V. Ford-Lloyd, 2012-12-06 It is a distressing truism that the human race during the last millennium has caused the exponential loss of plant genetic diversity throughout the world This has had direct and negative economic political and social consequences for the human race which at the same time has failed to exploit fully the positive benefits that might result from conserving and exploiting the world s plant genetic resources However a strong movement to halt this loss of plant diversity and enhance its utilisation for the benefit of all humanity has been underway since the 1960 s Frankel and Bennett 1970 Frankel and Hawkes 1975 This initiative was taken up by the Convention on Biological Diversity CBD 1992 that not only expounds the need to conserve biological diversity but links conservation to exploitation and development for the benefit of all Article 8 of the Convention clearly states the need to develop more effective and efficient guidelines to conserve biological diversity while Article 9 along with the FAO International Undertaking on Plant Genetic Resources promotes the adoption of a complementary approach to conservation that incorporates both ex situ and in situ techniques

Global Plant Genetic Resources for Insect-Resistant Crops Stephen L. Clement, 2019-04-23 An excellent reference book for plant breeders and entomologists Global Plant Genetic Resources for Insect Resistant Crops combines germplasm preservation with use in insect resistant crop

Quality Breeding in Field Crops Asif M. Iqbal Qureshi, Zahoor Ahmad Dar, Shabir Hussain Wani, 2019-02-15 Development of superior crops that have consistent performance in quality and in quantity has not received the same emphasis in the field of genetics and breeding as merited Specialty trait requires special focus to propagate Yet basic germplasm and breeding methodologies optimized to improve crops are often applied in the development of improved specialty types However because of the standards required for specialty traits methods of development and improvement are usually more complex than those for common commodity crops The same standards of performance are desired but the genetics of the specialty traits often impose breeding criteria distinct from those of non specialty possessing crops Specifically quality improvement programs have unique characteristics that require careful handling and monitoring during their development for specific needs Adding value either via alternative products from the large volumes of grain produced or development of specialty types is of interest to producers and processors This work assimilates the most topical results about quality improvement with contemporary plant breeding approaches The objective of this book is to provide a summary of the germplasm methods of development and specific problems involved for quality breeding In total fourteen chapters written by leading scientists involved in crop improvement research provide comprehensive coverage of the major factors impacting specialty crop improvement

Sáez-Vásquez, 2023-03-24 **Gene Flow Between Crops and Their Wild Relatives** Meike S. Andersson, M. Carmen de Vicente, 2010-02 Reviewing the relevant scientific and technical literature this work summarizes the current state of the art knowledge related to gene flow and introgression the permanent incorporation of genetic information from one set of differentiated populations into another between genetically modified crops and their wild relatives They analyze the biological framework for protecting the genetic integrity of indigenous wild relatives of crops in centers of crop origin and diversity focusing on the issues of emission dispersal and deposition of pollen and or seed the likelihood and extent of gene flow from crops to wild relatives and stabilization and the spread of traits in wild species The material is organized into crop chapters each of which covers general biological information of the crop the most important crop wild relatives together with information about their ploidy levels diverse genomes centers of origin and geographic distribution the crop s potential for hybridization with its wild relatives pollen flow studies related to pollen dispersal distances and hybridization rates the current state of the genetic modification technology regarding that crop and research gaps The crop chapters discuss banana and plantain barley canola and oilseed rape cassava manioc and yucca chickpea common bean cotton cowpea finger millet maize and corn oat peanut and groundnut pearl millet pigeonpea potato rice sorghum soybean sweet potato batata and camote and wheat and bread wheat **Plant Genetic Conservation** Nigel Maxted, B.V. Ford-Lloyd, J.G. Hawkes, 2013-12-01 The recent development of ideas on biodiversity conservation was already being considered almost three quarters of a century ago for crop plants and the wild species related to them by the Russian geneticist N Vavilov He was undoubtedly the first scientist to understand the importance for humankind of conserving for utilization the genetic diversity of our ancient crop plants and their wild relatives from their centres of diversity His collections showed various traits of adaptation to environmental extremes and biotypes of crop diseases and pests which were unknown to most plant breeders in the first quarter of the twentieth century Later in the 1940s 1960s scientists began to realize that the pool of genetic diversity known to Vavilov and his colleagues was beginning to disappear Through the replacement of the old primitive and highly diverse land races by uniform modern varieties created by plant breeders the crop gene pool was being eroded The genetic diversity of wild species was equally being threatened by human activities over exploitation habitat destruction or fragmentation competition resulting from the introduction of alien species or varieties changes and intensification of land use environmental pollution and possible climate change **Farmers? diversity is as crucial in agriculture as it is in nature and it is equally important to the economic health of both industrial and nonindustrial societies This book offers a sweeping assessment of crop diversity and the potential for its preservation Stephen B Brush develops a framework for investigating biological diversity in agriculture that focuses on the knowledge and practice of farmers and he shows how this human ecology perspective can be applied to three global issues that affect crop resources Brush defines the dimensions of crop diversity and outlines the essential questions surrounding it He describes the techniques used to maintain diversity in major crops of three cradles of agriculture in which he has worked potatoes in the Peruvian Andes maize in Mexico and wheat in Turkey Finally he explores the policy issues surrounding genetic erosion of crop varieties conservation of crop diversity and ownership of genetic resources DIV **Genetic and Molecular Analysis of Quantitative and Qualitative Late Blight Resistance in Tetraploid Potato** Christina A.
