transportation only 5% of the time When parked the fuel cell in the car can produce electricity from hydrogen which is
cleaner and more efficient than the current electricity system generating useful waste products in the form of heat and fresh
water The produced electricity heat and fresh water can be fed into the respective grids or be used directly in our house
office or the school of our kids The required hydrogen can be produced from gas natural gas biogas or electricity hydro wind
solar etc In the end these fuel cell cars can replace all power plants worldwide As a result the car as power plant can create
an integrated efficient reliable flexible clean smart and personalized transport energy and water system a real paradigm shift
