Fowler, Jean-Paul Liégeois, Alan Collins, Mohamed G. Abdelsalam, Mohamed Abd El-Wahed, 2021-07-30 This richly illustrated book reviews the geology tectonics and mineralization of the Arabian Nubian Shield ANS in 27 chapters It starts with an examination of the ANS lithospheric scale features explores Mesoproterozoic units and deals with the ANS oceanic stage Arc volcanism and plutonism post collision basins and volcanics are discussed as well as the younger granitoid magmatism and

the deformation history of the ANS The book provides information on ANS glacial stages and late magmatism Chapters are devoted to review the transition between ANS and the reworked continent to its south Finally it discusses how ANS structures influenced the overall East African Rift System *The Boundaries of the West African Craton* Nasser Ennih, Jean-Paul Liégeois, 2008 Petroleum Geology of Libya Don Hallett, 2002-02-26 Libya has the largest petroleum reserves of any country in Africa and since production began in 1961 over 20 billion barrels of oil have been produced Libya is scheduled to reach the mid point of depletion of reserves in 2001 and this provides a timely point at which to review the state of petroleum exploration in Libya A large amount of data has been published on the geology of Libya but it is scattered through the literature much of the older data has been superceded and several of the key publications especially those published in Libya are difficult to find This book represents the first attempt to produce a comprehensive synthesis of the petroleum geology of Libya It is based exclusively on published data supplemented by the author's experience gained during ten years work in Libya The aim of the book is to systematically review the plate tectonics structural evolution stratigraphy geochemistry and petroleum systems of Libya and provides valuable new data on fields production and reserves This volume will provide a ready source of reference to individuals and companies who wish to obtain an overview of the petroleum geology of Libya and will save them the laborious task of sifting through hundreds of publications to find the data they require The book includes 148 newly drawn figures *The Physical Geography of the Mediterranean* Jamie Woodward, 2009-05-07 This volume explores the climates landscapes ecosystems and hazards that comprise the Mediterranean world It traces the development of the Mediterranean landscape over very long timescales and examines modern processes and key environmental issues in a wide range of settings The Mediterranean is the only region on Earth where three continents meet and this interaction has produced a very distinctive Physical Geography This book examines the landscapes and processes at the margins of these continents and the distinctive marine environment between them Catastrophic earthquakes explosive volcanic eruptions and devastating storms and floods are intimately bound up within the history and mythology of the Mediterranean world This is a key region for the study of natural hazards because it offers unrivalled access to long records of hazard occurrence and impact through documentary archaeological and geological archives The Mediterranean is also a biodiversity hotspot it has been a meeting place for plants animals and humans from three continents throughout much of its history The Quaternary records of these interactions are more varied and better preserved than in any other part of the world These records have provided important new insights into the tempo of climate landscape and ecosystem change in the Mediterranean region and beyond The region is unique because of the very early and widespread impact of humans in landscape and ecosystem change and the richness of the archaeological and geological archives that chronicle this impact This book examines this history and these interactions and places current environmental issues in long term context Contributors Ramadan Husain Abu Zied Harriet Allen Jacques Blondel Maria Carmen Llasat
