Soft computing (SC) refers to the ability of a digital computer or robot to perform functions that are normally associated with intelligent individuals, such as reasoning and problem-solving. An example of this would be a project aimed at creating systems capable of reasoning, discovering meaning, generalising, or learning from past experience. Science and engineering problems that are both non-linear and complex can be solved using these methodologies. It has been proven that these algorithms can be used to solve numerous real-world problems. The techniques outlined can be used to increase the accuracy of existing models/equations, or they can be used to propose a new model that can address the problem.

Due to the increasing importance of these models, this thematic issue is aimed at shedding some light on the applications of SC algorithms in solving problems in Materials Science and Engineering. The thematic issue comprises nine papers, which are briefly summarised in the following paragraphs. The implemented methods in the following papers can be applied with caution to other science and engineering problems by researchers.

The first paper, entitled "A Novel Heuristic Algorithm for the Modelling and Risk Assessment of the COVID-19 Pandemic Phenomenon" [1], presented a novel SC technique for analysing the risk assessment of COVID-19 daily death cases in various countries (different parts of the world). Their model was able to categorise and predict the path of the pandemic phenomena while at the same time providing a useful tool for public health authorities in decision-making and operational planning. This paper, because of its importance, has been cited many times so far.

The second paper, entitled "The Influence of Various Structure Surface Boundary Conditions on Pressure Characteristics of Underwater Explosion" [2] was an excellent application of the hybrid finite element method (FEM) in the underwater explosion interaction. The authors proposed a Runge-Kutta discontinuous Galerkin method combined with FEM to solve the problem of the complex waves of fluids and structural dynamic response. Based on the results, the authors came up with some ideas for how the risk could be reduced in different situations.

Special Techniques for the Enzymologist, 1957 The critically acclaimed laboratory standard *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike The series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences *Special Techniques for the Enzymologist* Sidney P. Colowick, Nathan Oram Kaplan, 1957-10-28 The critically acclaimed laboratory standard *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike The series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences **Methods in Enzymology: Special techniques for the enzymologist** Sidney P. Colowick, Nathan Oram Kaplan, 1965 **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1975 **Advances in agronomy. 29.1977**, 1977 The Publishers' Trade List Annual, 1985 *Gases in Plant and Microbial Cells* Hans-Ferdinand Linskens, John F. Jackson, 2012-12-06 Modern Methods of Plant Analysis When the handbook *Modern Methods of Plant Analysis* was first introduced in 1954 the considerations were 1 the dependence of scientific progress in biology on the improvement of existing and the introduction of new methods 2 the difficulty in finding many new analytical methods in specialized journals which are normally not accessible to experimental plant biologists 3 the fact that in the methods sections of papers the description of methods is frequently so compact or even sometimes so incomplete that it is difficult to reproduce experiments These considerations still stand today The series was highly successful seven volumes appearing between 1956 and 1964 Since there is still today a demand for the old series the publisher has decided to resume publication of *Modern Methods of Plant Analysis* It is hoped that the New Series will be just as acceptable to those working in plant sciences and related fields as the early volumes undoubtedly were It is difficult to single out the major reasons for success of any publication but we believe that the methods published in the first series were up to date at the time and presented in a way that made description as applied to plant material complete in itself with little need to consult other publications Contributing authors have attempted to follow these guidelines in this New Series of volumes **Methods in Enzymology** Christophe Henri Werner Hirs, Serge N. Timasheff, 1986 **Methods of Soil Enzymology** Richard P. Dick, 2020-01-22 *Methods of Soil Enzymology* provides the first comprehensive set of vetted methods for studying enzymes in soils Readers will especially benefit from the step by step explanation of the lab procedures as well as background information for using these methods effectively and analyzing data Main topics include activity assays enzyme extraction and synthetic enzyme complexes Each method covered includes background information step by step descriptions of the procedure and special comments regarding nuances pitfalls and interpretation of the method Learn the latest research methods including enzyme extraction methods and procedures for creating synthetic enzyme complexes as well as the

newest ways to use small scale and high throughput methods for enzyme activity assays Written for the researcher but welcoming to those new to soil enzymology the introduction includes conceptual information to orient those who are not familiar with these methods but want to use them In the tradition of SSSA methods books *Methods of Soil Enzymology* features a comprehensive approach with a focus on ease of use **Molecular Enzymology** Christopher W.

Wharton, 2013-12-11 MOLECULAR ENZYMOLOGY BECAUSE OF ITS CHEMICAL AND MATHEMATICAL content is often regarded as a formidable and forbidding topic by undergraduates on a biology or biochemistry course As a result of teaching enzymology to undergraduates for a number of years we recognize the areas which appear to cause the most common difficulties in conceptual understanding We feel that a book treating those areas by means of a logical approach carefully developed from basic principles fills a gap in the multiplicity of enzymology texts currently available In writing this book we have had in mind the needs of Honours Biochemistry students in particular those who may take a special interest in enzymology The text covers the main bulk of the material required in the second and third years of such courses In addition those taking courses in Biological Chemistry may well find the book to be of central interest The book begins with a description of the fundamentals of catalysis illustrating these with simple chemical reactions which may be supposed to serve as models of catalytic processes Protein structure is discussed in terms of the fundamental forces which determine the shape and dynamic behaviour of protein molecules The approach emphasizes those features thought to be most intimately involved in the catalytic function of enzyme molecules and is illustrated with specific examples
