National Library of Medicine Current Catalog National Library of Medicine (U.S.), Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 Retroviral Insertion and Oncogene Activation Hsing-Jien Kung, Peter K. Vogt, 2012-12-06 An integrated retrovirus effectively becomes part of the cellular genome but with the difference that the virus to a large extent retains control over its own expression through nontranslated sequences in the long terminal repeat L TR Some retroviruses also code for nonstructural proteins that further regulate proviral expression Integration changes the cell genome it adds viral genes and in the case of transducing retroviruses also adds cell derived oncogenes that have been incorporated into the viral genome Integration can also have consequences for cellular genes The transcriptional signals in a provirus can activate expression of neighboring cellular genes the integration even can disrupt and thus inactivate cellular genes These effects of retroviral genomes take place in cis they are referred to as insertional mutagenesis and are the subject of this volume Almost 10 years have passed since W Hayward S Astrin and their colleagues found that in B cell lymphomas of chickens induced by avian leukosis virus transcription of the cellular proto oncogene myc was upregulated through the integration of a complete or partial provirus in its vicinity This landmark discovery suggested a mechanism by which retro viruses that do not carry cellular oncogenes in their genome nonacute retroviruses can cause cancer It contributed the first evidence for the carcinogen potential of oncogenes that are not part of a viral genome **Mechanisms in B-Cell Neoplasia 1990** Michael Potter, Fritz Melchers, 2013-03-12 The eighth workshop in this series on Mechanisms in B Cell Neoplasia 1990 was held in Wilson Hall at the National Institutes of Health Bethesda Maryland on March 28 30 Five major topics formed the basis for the discussions 1 progress in experimental models of B cell tumorigenesis 2 the role of IL 6 in plasma cell tumor formation with particular emphasis on human myeloma 3 immortalization and regulation of mitosis in B cells 4 the MYC gene in B cell neoplasia and 5 the role of EBV and other oncogenes in transformation of human B lymphocytes A meeting on the Epidemiology of Myeloma was held at the N I H on the preceding day and many of those interested in the clinical aspects of myeloma were also participants at the workshop Experimental Models of B Cell Tumor Development We have seen in the last eight years the steady growth of model experimental systems many of which have been designed to be counter parts of the major forms of human B cell tumors e g follicular lymphomas Burkitt s lymphomas acute B cell leukemia and multiple myeloma A variety of novel ways of inducing these tumors has been described Advantage has been taken of the experiments in nature to identify critical genes that play a role in tumor pathogenesis These genes have been identified by being near to viral insertion and chromosomal translocation sites or by having been incorporated or transduced into a defective transforming retrovirus Revue Roumaine de Biochimie , 1987

Hepadnaviruses William S. Mason, Christoph Seeger, 2012-12-06 Pioneering work on hepatitis B virus and hepatitis

delta virus and the discovery of hepatitis B like virus in animals during the 1970 s has been followed over the past ten years by an explosion of interest in how these viruses replicate maintain chronic infections and cause liver disease and hepatocellular carcinoma The purpose of this book is two fold First the authors of each chapter provide a summary of their specialty that will not only serve as an introduction but will also provide the newcomer to hepatitis B virology with up to date information and insights into the goals and accomplishments of each area of investigation Second since the diversification of interests and increased specialization of hepadnaviruses researchers has reached a level where it is no longer possible for any one individual to read all the primary literature this book will help to refocus interest on what is after all the major objective to understand and ultimately treat or prevent chronic liver disease and liver cancer Accordingly chapters are included which span a range of interests from the management of hepatitis B patients to new approaches to antiviral therapy from the role of hepadnavirus gene expression in DNA replication to the role of ribozymes in the delta virus life cycle from liver cancer in naturally infected woodchucks to liver disease in HBV transgenic mice to the use of hepatitis virus vectors to treat inherited enzyme deficiencies The Role of Viruses and the Immune System in Diabetes Mellitus Thomas

Dyrberg,2013-06-29 Research in diabetes has accelerated in two areas both of which are being reviewed in CTMI The first is the use of a variety of animal models the second is basic research in human investigation islet cell antigens and mapping of genes as sociated with susceptibility to disease Dr Thomas Dyrberg accepted editorial responsibility for this volume which covers the first area A second book to be published later in the year is edited by Drs Brekkeskov and Hansen CTMI 164 see page VI for contents Although the contributors to both volumes represent the international scientific community the editors are from the Hagedorn Research Laboratory in Denmark Work at this institute and the Steno Memorial Hospital has been dedicated to research in diabetes for decades and the insti tutions were appointed WHO Collaborating Centres for Re search and Training on the Pathogenesis of Diabetes Mellitus in 1983 It is worth noting that while addressing the hypothesis of the role of class II major histocompatibility glycoproteins in autoimmune diabetes insulin dependent diabetes IDDM a number of investigators established animal models in which class II molecules were expressed under the control of the rat insulin promoter While generating interesting information on 100M the finding of immunologic tolerance in such transgenic mice has attracted the attention of several basic immunologic laboratories for quite different reasons Thus we are reminded again of the Pasteur dictum that chance favors the prepared mind Michael B A Oldstone M D Poxviruses Richard W.

Moyer,Peter C. Turner,2012-12-06 The purpose of this volume is to highlight some current areas of poxvirus research which are likely to be particularly fruitful in the upcoming few years The first chapter by Drs Condit and Niles discusses poxvirus genetics Work in this area has provided mutants produced practical procedures to simplify the manipulation of viral genes and generated information about the molecular architecture and organization of genes characteristic of pox viruses One of the most intensively studied regions of the viral genome is the HindIII D region of vaccinia in which a combination of

classical and molecular genetic analysis of the region has been particularly revealing Within this region are open reading frames some of which are expressed early and others late organized in a fashion which is now known to be typical of these viruses Other studies related to temperature sensitive drug resistant and drug dependent mutants are also discussed Each of the other reviews included in this volume summarizes areas of research which have depended heavily on the genetics of the system The intracellular site of a poxvirus infection is mostly if not exclusively limited to the cytoplasm which dictates several interesting biological ramifications For example poxvirus transcription must occur in the cytoplasm rather than in the nucleus The virus copes with this situation by incorporating into the virion the enzymatic machinery necessary to initiate transcription from input virus

Retrovirus Infections of the Nervous System Michael B.A. Oldstone, Hilary Koprowski, 2012-12-06 Although retroviruses have long been associated with a variety of animal diseases active research in the field of human retroviruses dates from the discovery of human immunodeficiency virus HIV in association with acquired immunodeficiency syndrome AIDS The enormous research efforts in this field have been directed toward understanding the nature of the virus and toward its elimination through preventive vaccination and the cure of the disease Human T cell leukemia virus HTLV I was the first member of the human retrovirus family to be discovered It was implicated as the cause of adult T cell leukemia ATL even before the association of HIV and AIDS was established Research on HTLV 1 has however been lagging behind that of HIV because of the importance of AIDS Today HTLV 1 and possibly closely related HTLV 2 are associated with a variety of human neurologic diseases and research activities in this field may show that human retroviruses can cause a variety of human diseases in addition to those affecting the nervous system Papers in this volume attempt to acquaint the reader with the present state of research into retrovirus infection and related diseases of the nervous system
