Speech Perception By Ear And Eye A Paradigm For Psychological Inquiry:

Speech Perception By Ear and Eye Dominic W. Massaro, 2014-01-02 First published in 1987 This book is about the processing of information The central domain of interest is face to face communication in which the speaker makes available both audible and visible characteristics to the perceiver Articulation by the speaker creates changes in atmospheric pressure for hearing and provides tongue lip jaw and facial movements for seeing These characteristics must be processed by the perceiver to recover the message conveyed by the speaker The speaker and perceiver must share a language to make communication possible some internal representation is necessarily functional for the perceiver to recover the message of the speaker

Speech Perception by Ear and Eye: a Paradigm for Psychological Inquiry Dominic William Massaro, 1987

Speechreading by Humans and Machines David G. Stork, Marcus E. Hennecke, 2013-11-11 This book is one outcome of the NATO Advanced Studies Institute ASI Workshop Speechreading by Man and Machine held at the Chateau de Bonas Castera Verduzan near Auch France from August 28 to September 8 1995 the first interdisciplinary meeting devoted the subject of speechreading lipreading The forty five attendees from twelve countries covered the gamut of speechreading research from brain scans of humans processing bi modal stimuli to psychophysical experiments and illusions to statistics of comprehension by the normal and deaf communities to models of human perception to computer vision and learning algorithms and hardware for automated speechreading machines The first week focussed on speechreading by humans the second week by machines a general organization that is preserved in this volume After the inevitable difficulties in clarifying language and terminology across disciplines as diverse as human neurophysiology audiology psychology electrical engineering mathematics and computer science the participants engaged in lively discussion and debate We think it is fair to say that there was an atmosphere of excitement and optimism for a field that is both fascinating and potentially lucrative Of the many general results that can be taken from the workshop two of the key ones are these The ways in which humans employ visual image for speech recognition are manifold and complex and depend upon the talker perceiver pair severity and age of onset of any hearing loss whether the topic of conversation is known or unknown the level of noise and so forth

The Development of Intersensory Perception David J. Lewkowicz, Robert Lickliter, 2013-05-13 This book provides the latest information about the development of intersensory perception a topic which has recently begun to receive a great deal of attention from researchers studying the general problem of perceptual development This interest was inspired after the realization that unimodal perception of sensory information is only the first stage of perceptual processing Under normal conditions an organism is faced with multiple multisensory sources of information and its task is to either select a single relevant source of information or select several sources of information and integrate them In general perception and action on the basis of multiple sources of information is more efficient and effective Before greater efficiency and effectiveness can be achieved however the organism must be able to integrate the multiple sources of information By doing so the organism

can then achieve a coherent and unified percept of the world The various chapters in this book examine the developmental origins of intersensory perceptual capacities by presenting the latest research on the development of intersensory perceptual skills in a variety of different species By adopting a comparative approach to this problem this volume as a whole helps uncover similarities as well as differences in the mechanisms underlying the development of intersensory integration In addition it shows that there is no longer any doubt that intersensory interactions occur right from the beginning of the developmental process that the nature of these intersensory interactions changes as development progresses and that early experience contributes in important ways to these changes

Hearing by Eye II Ruth Campbell, Barbara Dodd, Denis K. Burnham, 1998 This volume outlines developments in practical and theoretical research into speechreading lipreading

Hearing Eye II Douglas Burnham, Ruth Campbell *G.Away*, B J Dodd, 2013-10-28 This volume outlines some of the developments in practical and theoretical research into speechreading lipreading that have taken place since the publication of the original *Hearing by Eye* It comprises 15 chapters by international researchers in psychology psycholinguistics experimental and clinical speech science and computer engineering It answers theoretical questions what are the mechanisms by which heard and seen speech combine and practical ones what makes a good speechreader Can machines be programmed to recognize seen and seen and heard speech The book is written in a non technical way and starts to articulate a behaviourally based but cross disciplinary programme of research in understanding how natural language can be delivered by different modalities

The Oxford Handbook of Psycholinguistics M. Gareth Gaskell, Gerry Altmann, 2007 The Oxford Handbook of Psycholinguistics brings together the views of 75 leading researchers in psycholinguistics to provide a comprehensive and authoritative review of the current state of the art in psycholinguistics With almost 50 chapters written by experts in the field the range and depth of coverage is unequalled

Foundations of Reading Acquisition and Dyslexia Benita A. Blachman, 2013-03-07 The chapters in this volume are based on presentations made at a recent conference on cognitive and linguistic foundations of reading acquisition The researchers who participated have all made contributions to the theoretical and empirical understanding of how children learn to read They were asked to address not only what they have learned from their research but also to discuss unsolved problems This dialogue prompted numerous questions of both a theoretical and applied nature generated heated debate and fueled optimism about the important gains that have been made in the scientific understanding of the reading process especially of the critical role played by phonological abilities

Experimental Phonetics Katrina Hayward, 2014-07-10 Traditionally investigations into speech and pronunciation have relied on the unaided skills of the phonetician in recognising and reproducing speech sounds But many practitioners are now using instruments to gain a greater understanding of speech and to be able to analyse speech patterns in situations when speaking and hearing would otherwise be inaccessible without the use of these instruments This new book looks at how this form of investigation has developed and considers the types of data that can be used and which questions

can be solved using experimental phonetics
