Speaking Minds Interviews With Twenty Eminent Cognitive Scientists:

Speaking Minds Peter Baumgartner, Sabine Payr, 2014-07-14 Few developments in the intellectual life of the past quarter century have provoked more controversy than the attempt to engineer human like intelligence by artificial means Born of computer science this effort has sparked a continuing debate among the psychologists neuroscientists philosophers and linguists who have pioneered and criticized artificial intelligence Are there general principles as some computer scientists had originally hoped that would fully describe the activity of both animal and machine minds just as aerodynamics accounts for the flight of birds and airplanes In the twenty substantial interviews published here leading researchers address this and other vexing questions in the field of cognitive science The interviewees include Patricia Smith Churchland *Take It Apart and See How It Runs* Paul M Churchland *Neural Networks and Commonsense* Aaron V Cicourel *Cognition and Cultural Belief* Daniel C Dennett *In Defense of AI* Hubert L Dreyfus *Cognitivism Abandoned* Jerry A Fodor *The Folly of Simulation* John Haugeland *Farewell to GOF AI* George Lakoff *Embodied Minds and Meanings* James L McClelland *Toward a Pragmatic Connectionism* Allen Newell *The Serial Imperative* Stephen E Palmer *Gestalt Psychology Redux* Hilary Putnam *Against the New Associationism* David E Rumelhart *From Searching to Seeing* John R Searle *Ontology Is the Question* Terrence J Sejnowski *The Hardware Really Matters* Herbert A Simon *Technology Is Not the Problem* Joseph Weizenbaum *The Myth of the Last Metaphor* Robert Wilensky *Why Play the Philosophy Game* Terry A Winograd *Computers and Social Values* and Lotfi A Zadeh *The Albatross of Classical Logic* Speaking Minds can complement more traditional textbooks but can also stand alone as an introduction to the field Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 **Clever as a Fox** Sonja Ingrid Yoerg, 2002 Researched *Clever as a Fox* will challenge your previously held notions about animals and the measure of intelligence both theirs and ours Understanding Cognitive Differences Across Cultures: Integrating Neuroscience and Cultural Psychology Tachia Chin, Francesco Caputo, Chien-liang Lin, Fengpei Hu, 2022-11-10

Self-Organizing Natural Intelligence Myrna Estep, 2006-12-26 *Self Organizing Natural Intelligence* brings new scientific methods to intelligence research that is currently under the influence of largely classical 19th century single causal theory and method This out dated classical approach has resulted in the single capacity g theory a central processor top down genetically determined linguistic view of intelligence that is directly contradicted by empirical facts of human and animal studies of intelligence This book proposes utilizes and demonstrates the research superiority of a highly developed multidisciplinary theory models approach to intelligence With conceptual tools concepts and mathematical methods more

suited to continuous dynamic phenomena of living things the entire scope of natural intelligence based upon empirical studies of actual human and animal experience is addressed Results show that human and animal intelligence is largely self organizing and emergent across a spectrum of major categories of kinds of natural intelligence not limited to a single top down capacity as current proponents of the single capacity g theory and IQ approach support Contrary to the single capacity verbal theory of intelligence this work argues and shows evidence for three major categories of natural intelligence Overwhelming empirical evidence is given to show that our understanding of cognition itself must be broadened to include nonverbal immediate awareness as a category of natural intelligence that is embedded within sensory and somatosensory motor processes that make possible yet another category of intelligence knowing how While most current theories of intelligence assume that the mind is entirely computational and also assume that sensation is cognitively neutral having no intentionality here empirical evidence is presented from numerous clinical studies showing that certain primitive sensory processes are not cognitively neutral nor do they require a representational language interface in order to be accessible to cognitive intelligence processes This volume describes a rigorous treatment and exhaustive classification of natural intelligence while also demonstrating a more adequate scientific and mathematical approach than current statistical and psychometric approaches shoring up the out dated and misused IQ hypothetical construct

Story Proof Kendall Haven, 2007-10-30 Like Stephen Krashen's important work in The Power of Reading Story Proof collects and analyzes the research that validates the importance of story story reading and storytelling to the brain development and education of children and adults Accomplished researcher and storyteller Kendall Haven establishes the need for understanding the research findings in neural psychology and brain development and the value of a common definition of story if one is to fully grasp the importance and necessity of story to the development of the human mind To support his case he reviews a wealth of research from storytellers teachers and others who have experienced the power of story firsthand The author has collected anecdotal experiences from over 100 performing storytellers and from 1 800 story practitioners mostly teachers who have made

extensive use of stories He has read more than 150 qualitative and quantitative research studies that discuss the effectiveness of stories and or storytelling for one or more specific applications education organizational management knowledge management medical and narrative therapy etc Forty of these studies were literature reviews and comparative studies including analysis of over 1 000 studies and descriptive articles He has also gathered research evidence from his own story performances for total audiences of over 4 million and from conducting story writing workshops with 200 000 students and 40 000 teachers

Governing Future Technologies Mario Kaiser, Monika Kurath, Sabine Maasen, Christoph Rehmann-Sutter, 2009-10-29 Nanotechnology has been the subject of extensive assessment hype unlike any previous field of research and development A multiplicity of stakeholders have started to analyze the implications of nanotechnology Technology assessment institutions around the world non governmental organizations think tanks re insurance companies and academics from science and technology studies and applied ethics have turned their attention to this growing field s implications In the course of these assessment efforts a social phenomenon has emerged a phenomenon the editors define as assessment regime Despite the variety of organizations methods and actors involved in the evaluation and regulation of emerging nanotechnologies the assessment activities comply with an overarching scientific and political imperative Innovations are only welcome if they are assessed against the criteria of safety sustainability desirability and acceptability So far such deliberations and reflections have played only a subordinate role This book argues that with the rise of the nanotechnology assessment regime however things have changed dramatically Situated at the crossroads of democratizing science and technology good governance and the quest for sustainable innovations the assessment regime has become constitutive for technological development The contributions in this book explore and critically analyse nanotechnology s assessment regime To what extent is it constitutive for technology in general for nanotechnology in particular What social conditions render the regime a phenomenon sui generis And what are its implications for science and society

Imagining Religion in the Czech Republic Jakub Havlicek, 2020-01-10 How do we think about ourselves and others Part one of the book examines the notion of human universals in cultural anthropology psychology linguistics and in cognitive sciences This part is focused on the issue of examining the processes of conceptualization categorization and classification of human types and identities and it examines the role of psychological essentialism in these processes It also focuses on the topic of religiously interpreted identities Part two examines religiosity in modern Czech society Contemporary Czech religiosity or lack thereof has been interpreted narrowly from the perspective of socially and culturally conceptualized factors Other possible factors have been neglected for example neuropsychological aspects The World Religions Paradigm that underpins teaching about religions in Czech education system is composed of reified concepts of religious traditions This paradigm provides a basis for essentialised conceptualization of religiously interpreted identities in contemporary Czech society Jakub Havl ek is Assistant Professor at the Department of Sociology and Cultural Anthropology Palack University Olomouc Czech Republic

What You Don't Know You Know Ken Eisold, 2010-01-19 The unconscious sprang to the attention of the West a hundred years ago and we are still struggling to absorb its full impact It was one thing to understand the concept to see it and believe it but another to live with it to take in fully its challenge to our deepest cultural assumptions Today as we expand our understanding of its reach we are still coming to grips with what it means This new unconscious is driven by the identities we assume the groups we belong to the ideas we inherit the languages we use all the elements that provide meaning and structure to our world What You Don't Know You Know is about this emergent understanding and how it forces us to rethink our relationships with each other as well as our beliefs about what it means to be a person to have a self It is for all those who want a better understanding of the complexity of human motivation whether as an executive faced with employees resisting change an elected official trying to forge agreements among competing interests a consultant brought in to restructure an ailing corporation or individuals struggling to understand their relationships and why they do the things they do All too often our actions do not conform to our explicit intentions or to common sense We are more constricted than we think but sometimes we are also smarter

Conceptual Challenges in Evolutionary Psychology Harmon R. Holcomb III, 2012-12-06 This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge information and data processing systems of all kinds no matter whether human other animal or machine Its scope is intended to span the full range of interests from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology concerning the mental capabilities of other species to ideas related to artificial intelligence and to computer science While primary emphasis will be placed upon theoretical conceptual and epistemological aspects of these problems and domains empirical experimental and methodological studies will also appear from time to time Few areas of inquiry have generated as much interest and enthusiasm in recent times as has the discipline known as evolutionary psychology but its pretensions and its accomplishments have not always been properly understood This collection brings together important work in psychology anthropology and the philosophy of science that contributes toward that goal especially by emphasizing the role of natural selection and sexual selection as crucial factors in the evolution of cognitive mechanisms for information processing The methodological studies that are presented here are bound to enhance appreciation for the scope and limits of this fascinating domain The editor has produced a fascinating volume that should appeal to a broad and diverse audience
