**Mathematical Results in Quantum Mechanics** Jaroslav Dittrich, Pavel Exner, Milos Tater, 2012-12-06 At the age of almost three quarters of a century quantum mechanics is by all accounts a mature theory There were times when it seemed that it had borne its best fruit already and would give way to investigation of deeper levels of matter Today this sounds like rash thinking Modern experimental techniques have led to discoveries of numerous new quantum effects in solid state optics and elsewhere Quantum mechanics is thus gradually becoming a basis for many branches of applied physics in this way entering our everyday life While the dynamic laws of quantum mechanics are well known a proper theoretical understanding requires methods which would allow us to derive the abundance of observed quantum effects from the first principles In many cases the rich structure hidden in the Schrödinger equation can be revealed only using sophisticated tools This constitutes a motivation to investigate rigorous methods which yield mathematically well founded properties of quantum systems

New Analytic and Geometric Methods in Inverse Problems Kenrick Bingham, Yaroslav V. Kurylev, E. Somersalo, 2013-04-17 In inverse problems the aim is to obtain via a mathematical model information on quantities that are not directly observable but rather depend on other observable quantities Inverse problems are encountered in such diverse areas of application as medical imaging remote sensing material testing geosciences and financing It has become evident that new ideas coming from differential geometry and modern analysis are needed to tackle even some of the most classical inverse problems This book contains a collection of presentations written by leading specialists aiming to give the reader up to date tools for understanding the current developments in the field

**Partial Differential Operators and Mathematical Physics** Michael Demuth, Bert-Wolfgang Schulze, 2012-12-06 The book contains the contributions to the conference on Partial Differential Equations held in Holzgau Germany in July 1994 where outstanding specialists from analysis geometry and mathematical physics reviewed recent progress and new interactions in these areas Topics of special interest at the conference and which now form the core of this volume are hyperbolic operators spectral theory for elliptic operators eta invariant singular configurations and asymptotics Bergman kernel attractors of non autonomous evolution equations pseudo differential boundary value problems Mellin pseudo differential operators approximation and stability problems for elliptic operators and operator determinants In spectral theory adiabatic and semiclassical limits Dirichlet decoupling and domain perturbations capacity of obstacles limiting absorption problems N body scattering and number of bound states are considered Schrödinger operators are studied with magnetic fields with random and with many body potentials and for nonlinear problems In semigroup theory the Feller property errors for product formulas fractional powers of generators and functional integration for relativistic semigroups are analyzed
