

Speed perception

- Drivers generally underestimate their speed
- Several perceptual (mostly visual) cues determine the feeling of speed:
- "Retinal streaming" (Gibson, 1950)
 - optical expansion of objects in the visual field
 - objects in the visual periphery move faster than more centrally located objects

Speed Of Perception:

Influence Mechanism of Visual Perception on Driver's Speed Control and Steering Behaviors Bing Liu, Jing Xia, Zipei Zhang, Naikan Ding, Wuxiong Peng, 2018-09-17 Visual perception and its relationship to the subsequent manipulative behaviors are fundamental for people to recognize the world. The most important manipulations of drivers are speed control and steering which could possibly guarantee a safe driving. So to avoid accidents the driver does a series of judgments, decisions and actions which could be impacted by the visual information it perceived. Over the past few decades, visual perception has gradually gone from the psychology domain to its relevant fields like the transportation science and engineering to play a more important role in the human factors in transportation. This book presents the state of the art in speed perception and its application with a kind of edge rate markings installed on roadways with empirical on-road experiments and field observations of naturalistic driving data. Reaching a great combination of the fundamental theory in cognitive psychology and the issues in traffic and transportation engineering, this book is one of the most practical and up-to-date references available on the subject of influence of visual perception on drivers' speed control and steering behaviors. This allows the knowledge of visual perception and transportation to be accessible to a wider range of audiences and also introduces new thoughts and new methods for decision makers/practitioners in dealing with traffic safety or related issues. The fundamental concepts, experimental process, statistical analyses and comprehensive discussions are covered in detail, providing the readers a systematic understanding of the field.

Social Perception M.D. Rutherford, Valerie A. Kuhlmeier, 2013-08-30 An interdisciplinary exploration of perceptual and cognitive processes underlying the ability to perceive social information drawing on current research and new experimental techniques. As we enter a room full of people we instantly have a number of social perceptions. We have an automatic perception of others as subjective agents with their own points of view, thoughts and goals, and we can quickly interpret minimal visual information to infer that something is animate. This book explores the perceptual and cognitive processes that allow humans to perceive and understand this social information quickly and apparently effortlessly. Top researchers in fields ranging from developmental psychology to vision science consider the perception of biological and animate motion inferences based on this motion and the early development of these abilities. These innovative contributions reflect a recent renewal of interest in the attribution of agency and the understanding of goal-directed behavior which has been accompanied by a rapid increase in empirical discoveries enabled by such new experimental techniques as brain imaging. The research presented in *Social Perception* suggests that an intuitive understanding of others is an integral part of human psychology, develops early, relies on a network of brain regions and may be compromised in autism.

Francesca Simion Jessica Sommerville James P Thomas Nikolaus Troje Amanda Woodward *Neurowaves* Georg Northhoff, 2023-05-15 The connection of the brain to the mind remains one of the most persistent mysteries in philosophy and neuroscience Georg Northhoff proposes a new approach to the so called mind body problem drawing on an insight from physics time structures all objects and events in the world and all objects and events are in dynamic relationship This also shapes the brain as it is part of the dynamic of the world as whole In *Neurowaves* Northhoff posits that the entire world is structured by waves of time and argues that the passing of these waves through our brains *neurowaves* produces mental experience The brain s neural waves transform into mental waves time and its dynamics are shared by brain and mind as their common currency As in physics and biology that radically changes our view Copernicus showed how the earth moves and that its movements are just a tiny part of the universe s passage of time Darwin showed that the human species is one among many species passing through evolution s timescales Northhoff calls for another Copernican revolution replacing the mind body problem with questions about the temporal dynamic relationship between brain and world Illustrated with vivid examples from different facets of the physical and biological world *Neurowaves* provides captivating insights and an innovative entertaining unravelling of the temporal connection of brain and mind

Speed Records Oliver Scott,AI,2025-03-10 Speed Records investigates the fascinating intersection of sports science and Japanese manga exploring the reality of human speed versus its exaggerated depiction in popular series It examines how athletes push the boundaries of velocity in sports like running and swimming highlighting the physiological constraints and training techniques involved For example muscle fiber composition and neurological signals play critical roles in achieving peak speeds The book also delves into how manga artists visually represent superhuman speed often defying physical laws The book uniquely contrasts these two worlds revealing how cultural fascination with superhuman abilities influences artistic expression The investigation progresses systematically first establishing a scientific foundation of human speed then analyzing the portrayal of speed in manga and finally comparing the two to understand their cultural significance By examining athletic achievements and manga artistry Speed Records offers a fresh perspective on human potential and imagination appealing to both sports enthusiasts and manga fans
