

Важнейшим из таких направлений является изучение роли биосферы в формировании климата и в развитии жизни на планете. Биосфера, представляющая собой совокупность всех живых организмов на Земле, оказывает огромное влияние на климатическую систему. Например, растения поглощают углекислый газ и выделяют кислород, что способствует снижению концентрации парниковых газов в атмосфере. Кроме того, биосфера играет важную роль в формировании почв и в регулировании водного цикла. Таким образом, биосфера является неотъемлемой частью климатической системы, и ее изучение имеет огромное значение для понимания процессов, происходящих на нашей планете.
