Islamic Heritage Architecture and Art III J. Casares,S. Dominguez Amarillo,2020-08-11 Islamic architecture has enriched design with a wide variety of structural shapes including among others unique arches a wide variety of vaults and domes which allow for new forms to be developed The influence that these structural forms have in non Islamic countries was one of the themes of the 3rd International Conference on Islamic Heritage Architecture and Art at which the included papers were presented There is much to learn from past experiences to arrive at solutions which are environmentally sound and sustainable in the long term As conventional energy resources become scarce the Islamic design heritage can offer invaluable lessons on how to deal in an efficient manner with cases of hard and extreme environments Traditional architecture and urban environments in most Islamic countries are now being eroded by overemphasis on a global type of architecture and city planning As a consequence many regions are losing their identity It will become increasingly important for new developments to take light of what the classical Islamic urban designs and architectures have to offer modern society An equally important aspect covered is the analysis of the materials employed and the types of structural elements particularly those unique to Islamic architecture Preserving this heritage requires the development of appropriate conservation techniques in response to the different materials used and the ways structural forms work including under extreme conditions such as earthquakes These papers deal with the design of many types of buildings in Islamic countries including not only the better known public buildings like mosques mausolea citadels and forts but also houses and gardens engineering works such as bridges and dams irrigation systems and many others which have also had a profound impact on society

Architecture and Choreography Beth Weinstein, 2024-05-31

Architecture and Choreography Collaborations in Dance Space and Time examines the field of architectural choreographic experiments unique interdisciplinary encounters and performed events generated through collaborations between architects and choreographers. Forty case studies spanning four decades give evidence of the range of motivations for embarking on these creative endeavors and diverse conceptual underpinnings, generative methods, objects of inquiry, and outcomes. Architecture and Choreography builds histories and theories through which to examine these works, the contexts within and processes through which the works emerged, and the critical questions they raise about ways to work together, sites, and citations, ethics, and equity, control, and agency. Three themes frame pairs of chapters: The first addresses disciplinarity through works that critically reflect upon their disciplines' tools, techniques, and conventions juxtaposed against projects that cite or use other art forms and cultural phenomena as source material. The second interrogates space and the role of spatial dispositifs, institutions, and sites, and their hidden and not so hidden conditions as conceptual drivers and structures to subvert, trouble, unsettle, and remember. The third asks who and what dances, finding a spectrum from mobilized architectural bodies to more than human cyborgs. Modes of collaboration and the temporalities and life cycles of projects inform bookending chapters. Architecture and Choreography offers vital lessons not only for architects and choreographers but also for students and practitioners across design and performance fields.
