Small Houses Contemporary Residential Architecture:

Small Houses Nicolas Pople, 2003 Small houses are no longer synonymous with cheap houses and lack of privilege. Instead, they symbolize a range of culturally coded values: compactness, efficiency, discrimination, discreteness, minimalism. Opening with a detailed exploration of the social and historical background behind compact housing in the twentieth century, this book goes on to feature 37 illustrated case studies that represent some of the best examples of small houses built worldwide within the past decade. Plot areas range from 7 to 150 square metres, 75 to 1615 square feet, and each project embodies a particular design approach towards compact accommodation. The case studies are organized into three chapters: Rural Retreats, Urban and Suburban Bases, and Small Clusters and Multiples, and include work by such architects as Toyo Ito, Lacaton Vassal, LOT EK, and Kazuyo Sejima. Small Houses Claudia Hildner, 2012-12-21 Japanese residential building has fascinated whole generations of architects. Alongside the strict implementation of design concepts, the small conceptual houses are excellent examples for the demonstration of creative experimentation in terms of spatial configuration, materials, and the ability to organise even the smallest of spaces. These houses are like miniature laboratories, clearly showing not only the creativity of Japanese architects but also the treatment of the ephemeral and the various layered boundaries between private and public space. The fast pace of change in Japanese cities has generated an enormous architectural treasure trove for the Western world. This treasure trove will be documented in *Small Houses*, a book that will also familiarise the reader with the broader aspects of Japanese culture. *Small Houses* is a book about Japanese residential building aimed at architects, interior designers, students, and anyone interested in this exciting and dynamic scene. The book focuses on the small houses, mainly one-family houses. The selected projects are by both internationally renowned architects and by architectural practices that are little known outside Japan. An in-depth treatment will be presented for each project, which will familiarise readers with the cultural and societal context and the particular Japanese way of treating certain architectural elements. The presentation of details that are irrelevant outside of Asia is avoided. The book focuses on existing residential buildings that are represented by images and other architectural graphics such as layouts and sections. **BIG little house** Donna Kacmar, 2015-01-09 What are the challenges architects face when designing dwelling spaces of a limited size? And what can these projects tell us about architecture and architectural principles in general? In *BIG little house*, award-winning architect Donna Kacmar introduces twenty real-life examples of small houses. Each project is under 1,000 square feet, 100 square meters in size, and brought together, the designs reveal an attitude towards materiality, light, enclosure, and accommodation which is unique to minimal dwellings. While part of a trend to address growing concerns about minimising consumption and lack of affordable housing, the book demonstrates that small dwellings are not always simply the result of budget constraints but constitute a deliberate design strategy in their own right. Highly illustrated and in full colour throughout, each example is based on interviews with the original architect and accompanied by detailed floor plans. This ground-breaking beautifully

designed text offers practical guidance to any professional architect or homeowner interested in small scale projects
