Soils And Quaternary Geology Of The Southwestern United States:

Soils and Quaternary Geology of the Southwestern United States Geological Society of America. Cordilleran Section. Meeting, 2018 **Soils and Quaternary Geology of the Southwestern United States** David L. Weide, Marianne L. Faber, 1985 **Geomorphology of Desert Environments** Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population. This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology. Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards. This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically. It begins with an overview of global deserts, proceeds through treatments of weathering, hillslopes, rivers, piedmonts, lake basins, and aeolian surfaces, and concludes with a discussion of the role of climatic change. Written by a team of international authors, all of whom are active in the field, the chapters cover the spectrum of desert geomorphology.

Geological Criteria for Evaluating Seismicity Revisited Franck A. Audemard M., Alessandro Maria Michetti, James McCalpin, 2011 Geological Survey Bulletin, 1987 **Past Glacial Environments** John Menzies, Jaap van der Meer, 2017-11-28 *Past Glacial Environments* Second Edition presents a revised and updated version of the very successful first edition of Menzies' book, covering a breadth of topics with a focus on the recognition and analysis of former glacial environments, including the pre-Quaternary glaciations. The book is made up of chapters written by various geological experts from across the world, with the editor's expertise and experience bringing the chapters together. This new and updated volume includes at least 45% new material, along with five new chapters that include a section on techniques and methods. Additionally, this new edition is presented in full color and features a large collection of photographs, line diagrams, and tables with examples of glacial environments and landscapes that are drawn from a worldwide perspective. Informative knowledge boxes and case studies are included, helping users better understand critical issues and ideas. Provides the most complete reference concerning the study of glacial processes and their geological, sedimentological, and geomorphological products. Comprised of chapters written by various geological experts from across the world. Includes specific case studies to alert readers to important ideas and issues. Uses text boxes throughout to explain key concepts from glacial literature. Presents full color photographs, line diagrams, and tables throughout. Hot Deserts M. J. Walker, 2012 This volume provides an authoritative and comprehensive state-of-the-art review of hot desert terrains in all parts of the world, their geomaterials, and influence on civil engineering, site investigation, design, and construction. It primarily covers conditions and materials in modern hot deserts, but there is also coverage of unmodified ancient desert soils that exhibit engineering behaviour similar to modern desert materials. Thorough and up-to-date guidance on modern field evaluation and ground investigation techniques in hot arid areas is provided, including reference to a new approach to the desert model and detailed specialised assessments.

of the latest methods for materials characterisation and testing The volume is based on world wide experience in hot desert terrain and draws upon the knowledge and expertise of the members of a Geological Society Engineering Group Working Party comprising practising geologists geomorphologists and civil engineers with a wealth of varied but complementary experience of working in hot deserts It is an essential reference book for professionals as well as a valuable textbook for students It is written in a style that is accessible to the non specialist A comprehensive glossary is also included The Geological Society of London Founded in 1807 the Geological Society of London is the oldest geological society in the world and one of the largest publishers in the Earth sciences The Society publishes a wide range of high quality peer reviewed titles for academics and professionals working in the geosciences and enjoys an enviable international reputation for the quality of its work

Soil Survey Manual (U.S. Department of Agriculture Handbook No. 18) U.S. Department of

Agriculture,2019-04-06 The Soil Survey Manual USDA Handbook No 18 provides the major principles and practices needed for making and using soil surveys and for assembling and using related data The term soil survey is used here to encompass the process of mapping describing classifying and interpreting natural three dimensional bodies of soil on the landscape This work is performed by the National Cooperative Soil Survey in the United States and by other similar organizations worldwide The Manual provides guidance methodology and terminology for conducting a soil survey but does not necessarily convey policies and protocols required to administer soil survey operations The soil bodies contain a sequence of identifiable horizons and layers that occur in repeating patterns in the landscape as a result of the factors of soil formation as described by Dokuchaev 1883 and Jenny 1941 Soils of the Past Gregory J. Retallack,2019-09-10 A student friendly textbook that describes ancient soils how they may be identified and their use in paleoenvironmental reconstruction Ancient soils contain vital mineralogical geochemical textural and paleontological information about the continental environments in which they formed Advances in isotope geochemistry and sequence stratigraphic models allow evermore detailed reconstructions of environmental change from paleosols and new insights into such diverse topics as atmospheric chemistry global change paleoecology geobiology and mass extinction This book educates readers about the field of paleopedology and how it remains a key area of investigation for geologists and environmental scientists seeking to learn about and reconstruct the condition and evolution of paleoenvironments Presented in three sections Soils and Palesols Factors in Soil Formation and Fossil Record of Soils Soils of the Past An Introduction to Paleopedology describes the main types of ancient soil procedures for identifying and studying them their classification and most significantly a wide array of examples of how paleosols have been used for paleoenvironmental reconstruction The book is an excellent reflection of the current state of knowledge and can be widely adopted over many disciplines All chapters have been revised and updated to reflect advances in soil science in the last two decades New tables display a wealth of new data added since the 2nd edition published in 2001 New figures have been added and line art has been redrawn to improve clarity and promote understanding References have been updated throughout Soils of the Past 3rd Edition is written for advanced undergraduates studying paleopedology as part of a degree in geology environmental science or physical geography and for interested professional earth scientists

Paleoenvironments and Paleohydrology of the Mojave and Southern Great Basin Deserts Yehouda Enzel,Stephen G. Wells,Nicholas Lancaster,2003 *The Web of Geological Sciences* Marion Eugene Bickford,2013 This volume covers many of the important advances in the geological sciences from 1963 to 2013 These advances include understanding plate tectonics exploration of the Moon and Mars development of new computing and analytical technologies understanding of the role of microbiology in geologic processes and many others Provided by publisher *Characteristics, Timing, and Hazard Potential of Liquefaction-induced Landsliding in the Farmington Siding Landslide Complex, Davis County, Utah* Michael D. Hylland,Mike Lowe,1998 The Farmington Siding landslide complex is in Davis County Utah about 25 kilometers north of Salt

Lake City The landslide complex covers approximately 19.5 square kilometers and is one of 13 late Pleistocene Holocene features along the Wasatch Front mapped by previous investigators as possible liquefaction induced lateral spreads The Farmington Siding landslide complex is in a largely rural area but state and interstate highways railroads petroleum and natural gas pipelines and other lifelines cross the complex Continued population growth along the Wasatch Front increases the likelihood of urban development within and adjacent to the landslide complex Development along the Wasatch Front has proceeded with little consideration of hazards associated with liquefaction induced landslides Slope failure mechanisms extent of internal deformation and timing of landslide events are poorly understood and these factors must be evaluated to enable local governments to effectively plan for development and implement hazard reduction strategies as needed The purpose of this study is to assess the hazard associated with future liquefaction induced landsliding within and adjacent to the Farmington Siding landslide complex by evaluating slope failure modes and extent of internal deformation within the complex inferring the geologic and hydrologic conditions under which landsliding occurred determining the timing of landsliding and evaluating the relative likelihood of various earthquake source zones to trigger liquefaction induced landsliding We chose the Farmington Siding landslide complex for this study because of the distinctiveness of geomorphic features on the northern part of the complex and the presence of landslide deposits that are clearly of different ages Furthermore because much of the area is rural appropriate land use planning measures can still be implemented to protect future development
