10th European Solid State Device Research Conference, ESSDERC 80, University of York, 15-18 September, 1980 ,1980 Lasers and Applications W.O.N. Guimares,C.-T. Lin,A. Mooradian,2013-06-29 The International Conference on Lasers and Applications was held in Rio de Janeiro Brazil from 29 June to 3 July 1980 This conference was held to commemorate the memory of Professor Sergio Porto who died suddenly about one year earlier while attending a laser conference in the Soviet Union The subject matter covered the active areas of laser devices photochemistry non linear optics high resolution spectroscopy photokinetics photobiology photomedicine optical communication optical bistability and Raman spectroscopy The conference was attended by over 150 people including scientists from Japan France England West Germany Norway Italy Brazil Chile Argentina India Canada and the United States Amemorial session attended by members of the Porto family and ranking Brazilian government dignitaries preceded the start of the conference The location of the conference in Rio de Janeiro Brazil was chosen because it was in the homeland of Sergio Porto and provided an opportunity for his friends colleagues and countrymen to pay homage to him The setting on Copacabana Beach afforded access to the lovely beaches restaurants and nightlife of one of the most beautiful and exciting cities of the world There were tours of the city together with a banquet that featured a performance by one of the best Samba Schools in Rio Financial support from many sponsors in Brazil and the United States is gratefully acknowledged in making this working conference a fitting tribute to the memory of Professor S P S Porto **The Physics of Submicron Semiconductor Devices** Harold L. Grubin,David K. Ferry,C. Jacoboni,2013-11-11 The papers contained in the volume represent lectures delivered as a 1983 NATO ASI held at Urbino Italy The lecture series was designed to identify the key submicron and ultrasubmicron device physics transport materials and contact issues Nonequilibrium transport quantum transport interfacial and size constraints issues were also highlighted The ASI was supported by NATO and the European Research Office H L Grubin D K Ferry C Jacoboni v

Extended Defects in Semiconductors D. B. Holt,B. G. Yacobi,2007-04-12 The elucidation of the effects of structurally extended defects on electronic properties of materials is especially important in view of the current advances in electronic device development that involve defect control and engineering at the nanometer level This book surveys the properties effects roles and characterization of extended defects in semiconductors The basic properties of extended defects dislocations stacking faults grain boundaries and precipitates are outlined and their effect on the electronic properties of semiconductors their role in semiconductor devices and techniques for their characterization are discussed These topics are among the central issues in the investigation and applications of semiconductors and in the operation of semiconductor devices The authors preface their treatment with an introduction to semiconductor materials and conclude with a chapter on point defect maldistributions This text is suitable for advanced undergraduate and graduate students in materials science and engineering and for those studying semiconductor physics

The Physics of Submicron Structures Harold L. Grubin,2012-12-06 Research on electronic transport in ultra small dimensions has been highly stimulated by the sensational developments in silicon technology and very large scale integration The papers in this volume however have been influenced to no lesser extent by the advent of molecular beam epitaxy and metal organic chemical vapor deposition which has made possible the control of semiconductor boundaries on a quantum level This new control of boundary condi tions in ultra small electronic research is the mathematical reason for a whole set of innovative ideas For the first time in the history of semiconductors it is possible to design device functions from physical considerations involving ngstom scale dimensions At the time the meeting was held July 1982 it was one of the first strong signals of the powerful developments in this area During the meeting important questions have been answered concerning ballistic transport Monte Carlo simulations of high field transport and other developments pertinent to new device concepts and the understanding of small devices from physics to function The committee members want to express their deep appreciation to the speakers who have made the meeting a success The USER pro ject of DOD has been a vital stimulous and thanks go to the Army Research Office and the Office of Naval Research for financial sup port Urbana January 1984 K Hess Conference Chairman J R Brews L R Cooper Ex Officio D K Ferry H L Grubin G J Iafrate M I Nathan A F
