**Matters of the Heart** Fay Bound

Alberti,2010-01-14 The heart is the most symbolic organ of the human body Across cultures it is seen as the site of emotions as well as the origin of life We feel emotions in the heart from the heart stopping sensation of romantic love to the crushing sensation of despair And yet since the nineteenth century the heart has been redefined in medical terms as a pump an organ responsible for the circulation of the blood Emotions have been removed from the heart as an active site of influence and towards the brain It is the brain that is the organ most commonly associated with emotion in the modern West So why then do the emotional meanings of the heart linger Why do many transplantation patients believe that the heart for instance can

transmit memories and emotions and why do we still refer to emotions as heartfelt We cannot answer these questions without reference to the history of the heart as both physical organ and emotional symbol Matters of the Heart traces the ways emotions have been understood between the seventeenth and nineteenth centuries as both physical entities and spiritual experiences With reference to historical interpretations of such key concepts as gender emotion subjectivity and the self it also addresses the shifting relationship from heart to brain as competing centres of emotion in the West The History of Cardiology ,1986 Jan van Eyck Craig Harbison,2012-01-01 The surviving work of Flemish painter Jan van Eyck c 1395 1441 consists of a series of painstakingly detailed oil paintings of astonishing verisimilitude Most explanations of the meanings behind these paintings have been grounded in a disguised religious symbolism that critics have insisted is foremost But in Jan van Eyck Craig Harbison sets aside these explanations and turns instead to the neglected human dimension he finds clearly present in these works Harbison investigates the personal histories of the true models and participants who sat for such masterpieces as the Virgin and Child and the Arnolfini Double Portrait This revised and expanded edition includes many illustrations and reveals how van Eyck presented his contemporaries with a more subtle and complex view of the value of appearances as a route to understanding the meaning of life **The Feeling Heart in Medieval and Early Modern Europe** Katie Barclay,Bronwyn Reddan,2019-12-02 The heart is an iconic symbol in the medieval and early modern European world In addition to being a physical organ it is a key conceptual device related to emotions cognition the self and identity and the body The heart is read as a metaphor for human desire and will and situated in opposition to or alongside reason and cognition In medieval and early modern Europe the feeling heart the heart as the site of emotion and emotional practices informed a broad range of art literature music heraldry medical texts and devotional and ritual practices This multidisciplinary collection brings together art historians literary scholars historians theologians and musicologists to highlight the range of meanings attached to the symbol of the heart the relationship between physical and metaphorical representations of the heart and the uses of the heart in the production of identities and communities in medieval and early modern Europe *Dostoevsky and Kant* Evgenia Cherkasova,2009 In this book Evgenia Cherkasova brings the philosopher Kant and the novelist Dostoevsky together in conversations that probe why duty is central to our moral life She shows that just as Dostoevsky is indebted to Kant so Kant would profit from the deeply philosophical narratives of Dostoevsky which engage the problem of evil and the claims of human community She not only produces a novel reading of Dostoevsky but also guides us to later often neglected Kantian texts This study is written with scholarly care penetrating analysis elegance of style and moral urgency Cherkasova writes with both mind and heart Emily Grosholz Professor of Philosophy The Pennsylvania State University **Hearts Exposed** A. Nathoo,2009-01-30 This book examines the relationship between medicine and the media in 1960 s Britain when the first wave of heart transplants were as much media as medical events and marked a decisive period in post war history Public trust in their doctors was significantly undermined and medicine was

held publicly to account as never before      [This Mortal Coil](#) Fay Bound Alberti,2016-04-08 To many people the idea that the body has its own history might sound faintly ridiculous The body and its experiences are usually seen as something that we share with people from the past Like human nature it represents the unchanging in a changing world Bodies just are But the body does have a history The way that it moves feels breathes and engages with the world has been viewed very differently across times and cultures For centuries we were believed to be composed of souls that were part of the body and inseparable from it Now we exist in our heads and our bodies have become the vessels for that uncertain and elusive thing we call our true selves The way we understand the material structure of the body has also changed radically over the centuries From the bones to the skin from the senses to the organs of sexual reproduction every part of the body has an ever changing history dependent on time culture and place This Mortal Coil is an exploration of that history Peeling away our assumptions about the unchanging nature of the human body Fay Bound Alberti takes it apart in order to put it back anew telling the cultural history of our key organs and systems from the inside out from blood to guts brains to sex organs The understanding of the modern body she reveals in the process is far removed from the eternal or timeless object of common assumption In fact she argues its roots go back no further than the sixteenth century at the earliest and it has only truly existed in its current form since the nineteenth century      **The Body of Frankenstein's Monster** Cecil Helman,2004-01-01 Frankenstein Werewolves Dracula These images aren't just imaginary creatures they're also powerful symbols of the body The body can be thought of as a machine made up of parts like Frankenstein's monster or as a creature ruled by animalistic urges or as an entity that's vulnerable to infection from a diseased fiend In The Body of Frankenstein's Monster Cecil Helman M D expands our view of our bodies by exploring its cultural and artistic representations      *Physicians of Western Medicine* Robert A.
