The Mind-Brain Continuum Susan Gordon, 2023-01-01 This insightful book proposes a holistic theory of the development of self drawing on interdisciplinary literature in existential phenomenology neurophenomenology intracrinology endocrinology and naturopathic medicine The psychoneurointracrine hypothesis bridges the gap between the mind and brain providing a framework to explain the complex system that facilitates development of one's sense of self and well being The book challenges assumptions in present day neuroscience and psychiatry placing the mind and brain on a continuum of health and growth rather than reducing the study of human consciousness to neurobiological terms and pathological classifications In this landmark book Susan Gordon presents a bold hypothesis one that underscores the importance of psychoneurointracrine activity and links it to female neurology and the development of one's sense of self She brilliantly places this activity which serves as a mind body bridge within the frameworks of neurophenomenology and non linear dynamics Her psychoneurointracrine hypothesis is a tour de force one that is holistic integrating intracrinology with psychology and neurology This hypothesis undercuts the current assumption that the mind is an epiphenomenon of the brain creating a paradigm that impacts science's understanding of behavior experience consciousness and human agency Stanley Krippner PhD Affiliated Distinguished Faculty California Institute of Integral Studies San Francisco CA In her fascinating book Susan Gordon develops a novel theory about the biological connection between mind brain and organism Drawing on empirical research on the role of the female hormonal system in basal states of self and mood she shows that the biochemistry of the endocrine system must be viewed as an indispensable foundation for the emergence of embodied self awareness The homeostasis and hormonal balance of the organism is integral to the sense of well being and the development

of meaning but it is also continually modulated and influenced by the subject's experience of his or her world. In this way she makes a decisive contribution to a theory of embodiment that goes far beyond a computational theory of the brain to focus on the biochemical organismic processes at the root of the mind.
