Small GTPases and Their Regulators Part A-Ras Family, 1995 *Small GTPases and Their Regulators* William Edward Balch, Channing J. Der, Alan Hall, 1995 **Small GTPases and Their Regulators, Part A**, 1995 **Redox Cell Biology and Genetics, Part A** Chandan K. Sen, Lester Packer, 2002-07-22 The critically acclaimed laboratory standard for more than forty years *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry. Since 1955 each volume has been eagerly awaited, frequently consulted, and praised by researchers and reviewers alike. Now with more than 300 volumes all of them still in print, the series contains much material still relevant today, truly an essential publication for researchers in all fields of life sciences. Key Features: Cellular Responses, Tissues and Organs. Protein Sensors of Reactive Oxygen Species, Part A: Selenoproteins and Thioredoxin, 2002-03-12 This volume of *Methods in Enzymology* is concerned with the rapidly developing field of selenoprotein synthesis and its related molecular genetics. Progressive information on the topics of proteins as redox sensors, selenoproteins, and the thioredoxin system is studied using methods such as bioinformatics, DNA chip technology, cell biology, molecular genetics, and enzymology. The information on novel selenoproteins identified from genomic sequence data, as well as current knowledge on glutathione peroxidases, selenoprotein P, iodothyronine deiodinases, and thioredoxin reductases, is presented in a method-based approach. **Guide to Yeast Genetics and Molecular and Cell Biology, Part C** Christine Guthrie, Gerald R. Fink, 2002-06-25 This volume and its companion Volume 350 are specifically designed to meet the needs of graduate students and postdoctoral students as well as researchers by providing all the up-to-date methods necessary to study genes in yeast. Procedures are included that enable newcomers to set up a yeast laboratory and to master basic manipulations. Relevant background and reference information given for procedures can be used as a guide to developing protocols in a number of disciplines. Specific topics addressed in this book include cytology, biochemistry, cell fractionation, and cell biology. **Antisense Technology, Part A, General Methods, Methods of Delivery, and RNA Studies**, 1999-11-01 Antisense technology is the ability to manipulate gene expression within mammalian cells, providing powerful experimental approaches for the study of gene function and gene regulation. For example, methods that inhibit gene expression permit studies which probe the normal function of a specific product within a cell. Such methodology can be used in many disciplines such as pharmacology, oncology, genetics, cell biology, developmental biology, molecular biology, biochemistry, and neurosciences. This volume will be a truly important tool in biomedical-oriented research.
