Small Animal Clinical Pharmacology:

Small Animal Clinical Pharmacology Jill E. Maddison, Stephen W. Page, David B. Church, 2008 *Small Animal Clinical Pharmacology* is a practical clinically oriented pharmacology text designed to provide the veterinary student and practitioner with all the relevant information needed when designing drug treatment regimens for pets in small animal veterinary practice. Comprehensively updated and revised the second edition of this core text covers essential new information on drugs used in the management of a range of presenting conditions including heart disease and cardiac arrhythmias. For the second edition new authors, superb new illustrations and a second colour have all been introduced. With its unique approach combining a thorough understanding of the pharmacological action of drugs with a basic understanding of the relevant physiology and pathophysiology of systems and tissues affected, *Small Animal Clinical Pharmacology* continues to be an indispensable book for all veterinary students and practitioners. Organised by drug class in a uniform and detailed structure which means it is easy to locate key information on dose rates, routes of administration, drug interactions and special considerations at a glance. Key chapters based around treatment of disorders of particular body systems eg cardiovascular and thyroid disorders. Essential introductory chapters covering pharmacokinetics, general pharmacological principles and adverse reactions for a thorough basic grounding in the subject. All authors are experienced clinicians and recognised experts in their field who bring a down to earth and practical approach to the text.

Small Animal Clinical Pharmacology Jill E. Maddison, Stephen W. Page, David B. Mammalian Toxicology of Insecticides Tim Marrs, 2012-01-19 Insects more similar in structure and physiology to mammals than plants or fungi. Consequently insecticides are often of greater toxicity to mammals than herbicides. This is particularly the case with neurotoxins. However some insecticides are targeted at structures or hormonal systems specific to insects: insect growth regulators, chitin synthesis inhibitors, so are less harmful but can still be mildly haematotoxic. There are therefore issues specific to insecticides which do not occur with other pesticides, hence the need for a book specifically on insecticide toxicology in mammals. The book starts with general issues relating to the mammalian toxicity of insecticides including target, non-target specificity, nomenclature and metabolism of insecticides. It then goes on to discuss specific types of insecticide including organochlorines, anticholinesterases, pyrethrum and synthetic pyrethroids, nicotine and the neonicotinoids, insect growth regulators, ecdysone agonists, chitin synthesis inhibitors, insecticides of natural origin, biological insecticides and insecticides used in veterinary medicine.
