Smoke Exposure at Western Wildfires Timothy E. Reinhardt, 2000

Timothy E. Reinhardt, Roger D. Ottmar, 2000 Smoke exposure measurements among firefighters at wildfires showed that between 3-5% of the shift average exposures exceeded occupational exposure limits OEL for carbon monoxide CM respiratory irritants Among workers involved in direct attack of actively burning areas maintaining fireline boundaries peak exposure situations could be several times greater than recommended OEL for short term exposures Exposure to acrolein benzene formaldehyde respirable particulate matter could be predicted from measurements of carbon monoxide Electrochemical dosimeters for CM were the best tool for routinely assessing smoke exposure Tables

Modelling, Monitoring and Management of Forest Fires II G.

Perona, C. A. Brebbia, 2010 As in the past future forest fire scenarios are impacted by climatic trends and changes in climatic extremes as well as by anthropic pressure It is to be expected that future trends especially in the Mediterranean regions will certainly lead to an increasing impact of human pressure on the natural environment due to increases in tourism and to the enlargement of urban residential areas invading the countryside Forecasting the effects of both factors climatic and anthropic and separating their effects on forest fires frequencies may be particularly difficult but is essential to improve our knowledge of forest fire occurrence probability and to better organize prevention and fighting activities At the same time estimation of the possible increase of fire risk over coming years is important taking into account also the diverse fire prone environments present in the Mediterranean as well as many other areas mountain slopes coastal zones large islands etc This book contains peer reviewed papers presented at the Second International Conference on Modelling Monitoring and

worse health outcomes from disasters have fewer resources for responding and rebuilding and receive less assistance from state local and federal agencies Because burning wood releases particulate matter and other toxicants the health effects of wildfires extend well beyond burns In addition deposition of toxicants in soil and water can result in chronic as well as acute exposures On June 4 5 2019 four different entities within the National Academies of Sciences Engineering and Medicine held a workshop titled Implications of the California Wildfires for Health Communities and Preparedness at the Betty Irene Moore School of Nursing at the University of California Davis The workshop explored the population health environmental health emergency preparedness and health equity consequences of increasingly strong and numerous wildfires particularly in California This publication is a summary of the presentations and discussion of the workshop Climate Change and Air Pollution Rais Akhtar, Cosimo Palagiano, 2017-10-05 This book discusses regional and international climate change air pollution and human health scenarios The research from both industrialized and developing countries focuses on region specific perspectives of climate change impacts on air pollution After analyzing the variations of climate data over recent decades the authors consider the different effects of climate change on air pollution and health As stressed by the IPCC pollen smoke and ozone levels are likely to increase in a warming world affecting the health of residents of major cities Rising temperatures will worsen air quality through a combination of more ozone in cities bigger wild fires and worse pollen outbreaks according to a major UN climate report The report follows the World Health Organization in finding that air pollution is the world's greatest environmental health risk killing 7 million people in 2014 compared to 0.4 million deaths due to malaria Deteriorating air quality will most affect the elderly children people with chronic ill health and expectant mothers Another report suggests that more than 5.5 million people die prematurely each year due to air pollution with over half of those deaths occurring in China and India A study on the air pollution in the USA suggests that more than half of US population lives in areas with potentially dangerous air pollution and about six out of 10 of the top cities for air pollution in the USA are located in the state of California In the face of future climate change scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems especially in more populated regions of the world It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution Additionally the authors consider the various measures that different countries and groups of countries like the European Union have adopted to mitigate the problems arising from climate change and to safeguard the health of population The book examines the increasing incidence of diseases largely caused by climate change The countries regions covered in this study include the USA Northern Europe U K Southern Europe Italy Canada Australia East Asia Russia Hong Kong Taiwan Thailand Malaysia Indonesia India South Africa Mexico Brazil Caribbean countries and Argentina
