Soil Quality and Agricultural Sustainability R. Lal, 1998-11-01
Soil degradation causes a shrinking of arable land resources and the persistence of starvation and malnutrition. The depletion is compounded by the increasing populations of developing tropical nations and the conversion of agricultural land to other uses. As a result, per capita grain harvesting and irrigated land is in steady decline all over the world. The decrease in horticultural resources and productivity has inspired *Soil Quality and Agricultural Sustainability*, which is based primarily on papers presented at the 1996 conference on soil degradation sponsored by Ohio State University, the USAID, and the International Agricultural Research Centers. The book addresses itself to six concerns: basic concepts and global issues; nutrient and water inputs; soil quality management in Asia, Africa, and the Tropical Americas; and future priorities. The Editor's goal is a new paradigm in soil quality research: a multidisciplinary approach. He proposes that an erosion management program include soil scientists, hydrologists, climatologists, sedimentologists, geographers, agronomists, agricultural engineers, land use planners, economists, anthropologists, and social scientists. Lal advocates an optimistic, forward-thinking brand of soil science that concentrates on conservation and fertility. The 26 chapters explore what Lal considers to be the priorities: agricultural sustainability, soil quality, food security, quality restoration, long-term management, and the failure to adopt new technology. In sum, they paint a comprehensive portrait of the current state and future prospects for worldwide agronomic viability.

Soil Fertility Decline in the Tropics Alfred E.

Hartemink,2003 Wide coverage of soils and perennial cropping systems in the tropics Synthesis of decades of research Challenges assumptions on the benefits of plantations for soil fertility It is generally assumed that soil fertility decline is widespread in the tropics and that this is largely associated with annual cropping and subsistence farming In contrast perennial plant cover as in plantation agriculture provides better protection for the soil This book reviews these concepts focusing on soil chemical changes under different land use systems in the tropics These include perennial crops annual crops and forest plantations Two case studies on sisal plantations in Tanzania and sugar cane in Papua New Guinea are presented for detailed analysis The author demonstrates that soil fertility decline is also a problem on plantations *Land Use, Land Cover and Soil Sciences - Volume VI* Willy H. Verheye,2009-09-19 This Encyclopedia of Land Use Land Cover and Soil Sciences is a component of the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Land is one of our most precious assets It represents space provides food and shelter stores and filters water and it is a base for urban and industrial development road construction leisure and many other social activities Land is however not unlimited in extent and even when it is physically available its use is not necessarily free either because of natural limitations too cold too steep too wet or too dry etc or because of constraints of access or land tenure This 7 volume set contains several chapters each of size 5000 30000 words with perspectives applications and extensive illustrations It carries state of the art knowledge in the fields of Land Use Land Cover and Soil Sciences and is aimed by virtue of the several applications at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs Managing Organic Matter in Tropical Soils: Scope and Limitations Christopher Martius,Holm Tiessen,Paul L.G. Vlek,2013-11-11 Soil organic matter is a reservoir for plant nutrients provides water holding capacity stabilizes soil structure against compaction and erosion and thus determines soil productivity All agriculture to some degree depends on soil organic matter It has long been known that soil organic matter declines when land is taken into cultivation and that the productivity of new agricultural land is governed by fertility contributions from decomposing natural organic matter The expansion of agriculture to ever new and more fragile lands particularly in tropical and developing regions causes environmental degradation with local effects on soil quality regional effects on landscape integrity and water quality and global effects on carbon cycles and the atmosphere This book summarizes current knowledge of the properties and dynamics of soil organic matter in the tropics its role in determining soil quality its stability and turnover and the options for management in the context of tropical landuse systems for a readership of resource scientists economists and advanced students Maintenance of organic matter is critical for preventing land degradation Case studies and practical applications are therefore an important part of the book as are the exploration of future directions in research and management **Encyclopedia of Soil Science** Rattan Lal,2006 Upholding the high standard of quality set by the previous edition this two volume second edition offers a vast array of recent peer

Principles and Practice of Soil Science Robert E. White, 2005-10-07 Principles and Practice of Soil Science Fourth Edition provides a current and comprehensive introduction to soil science for students in the fields of environmental and agricultural science ecology soil and land management natural resource management and environmental engineering Covers all aspects of soil science including soil habitat processes in the soil environment and soil management Emphasizes the applications of soil science to the solution of practical problems in soil and land management Highlights real world examples drawn from the author's international experience in the field Includes an expanded colour section of soil profiles and other features and greater coverage of international soil classification Features new problem sets and questions at the end of each chapter designed to reinforce important principles An answer key is provided at the end of the text

Sustainable Land Management in the Tropics Fred Zaal, 2016-04-01 Bringing together case studies from Kenya Benin Cameroon and the Philippines this volume provides a multidisciplinary overview of the economics of natural resource management in Tropical regions at household and village level By comparing a wide array of climatic and economic conditions it examines the effect of location and access to the market as well as the importance of national policies have on soil and water conservation The book not only analyzes the benefits of soil and water conservation based on econometric studies but also assesses the costs involved In doing so it challenges commonly held assumptions about poorer community's ability to finance such measures

Human Activities and the Tropical Rainforest Bernard K. Maloney, 2013-11-11 Arising initially from a conference the papers published here have been integrated into book form to provide information on human activities and the tropical rainforest in the past and present and on the possible future of the rainforest in a unique way Other books have considered some but not all of these themes however none has stressed the continuity of change over time and its possible outcome for the people of the forest as well as for the forest itself Because of the approach taken this book should appeal across traditional disciplinary boundaries Indeed a prime aim has been to suggest that rainforest because of its complexity and the complexity of people rainforest relationships throughout time deserves study from a broad perspective This book poses more questions than answers about the rainforest and it is hoped that it will encourage readers to think about the rainforest in a wider way than hitherto This book is aimed at geographers physical and human social anthropologists archaeologists pedologists foresters and tropical botanists and will be of value to graduates of various disciplines setting out to research the rainforest

Visions of Sustainability Stephen Morse, Nora McNamara, Benjamin Okwoli, 2018-05-08 This title was first published in 2000 Sustainable development has grown to compass cultural socio economic political and environmental issues and the use of Sustainability indicators SIs is seen by many as central to its implementation After all how can one do sustainable development unless one knows when it has been attained The adoption of SIs in such a context is logical but does present a number of practical difficulties So far much of the published material consists of theoretical SI frameworks with little practical experience on their use in development scenarios In contrast this volume is based on the results of a six year project designed to develop and evaluate the use of SLs in a Nigerian village For the first time this takes into consideration the views and perspectives of the local population and in doing so addresses key issues that are vital for anyone attempting to put sustainable development into practice
