Solar Phenomena In Stars Stellar Syste:

Solar Phenomena in Stars and Stellar Systems R.M. Bonnet,A.K. Dupree,2012-12-06 This book represents the proceedings of a NATO Advanced Study Institute which was held at Bonas from August 25 till Sep tember 5 1980 and was devoted to the study of Solar Phenomena in Stars and Stellar Systems It is intended for a broad audi ence Students and post doctoral scientists for example can dis cover new aspects of astrophysics The general spirit of the ASI was aimed at presenting a unified aspect of astrophysical phenomena which can be studied intensively on the Sun although they are of a much more general nature On the other hand spe cialists in solar or stellar physics will find here the latest theoretical developments and or the most recent observations made in their own field of research An extensive bibliography will be found throughout the various sections to which the reader may refer for more detailed developments in various specific areas In the past stellar and solar astrophysics have more or less followed their own independent tracks However with the rapid development of modern techniques in particular artificial satellites like the International Ultraviolet Explorer and the Einstein Observatory which provide a new wealth of data it appears that chromospheres coroneae magnetic fields mass loss and stellar winds etc are found not only in the Sun but occur also in other stars Frequently these other stars represent quite different conditions of gravity lumino ity and other parameters from those occurring in the Sun The Origin of Nonradiative Heating/momentum in Hot Stars Anne Barbara Underhill,A. G. Michalitsianos,1985 **Literature 1981, Part 1** Siegfried Böhme,Professor Dr. Walter Fricke,Inge Heinrich,Wilfried Hofmann,Dietlinde Krahn,Dorothea Rosa,Dr. Lutz D. Schmadel,Gert Zech,2013-11-11 **Energy Research Abstracts** ,1982 *Activity in Red-Dwarf Stars* P.B. Byrne,M. Rodono,2013-11-11 IAU Colloquium No 71 had its immediate origins in a small gathering of people interested in the optical and UV study of flare stars which took place during the 1979 Montreal General Assembly We recognized that a fundamental change was taking place in the study of these objects Space borne instruments especially IUE and Einstein and a new genera tion of ground based equipment were having a profound effect on the range of investigations it was possible to make To extract maximum benefit from these new possibilities it would be necessary as never before to have good communication with colleagues in other disciplines for instance with atomic and solar physicists Similarly studies of phenomena associated with the outer atmospheres of the late type stars could now hope to give significant insights into certain aspects of solar activity So in view of the wide range of backgrounds of those participating the meeting had an unusually high proportion of invited reviews while most of the contributed papers were presented as posters It is gratifying that in the short time since the meeting a good deal of correspondence has been received from participants remarking on the success of this format Once the decision had been taken in principle to hold the meeting a very considerable amount of work fell on the two organizing committees viz the Scientific and Local Organizing Committees The Scientific Organizing Committee was chaired by D J Mullan and consisted of A D **Active Close Binaries** Cafer Ibanogamalu,2012-12-06 Since the 1970s symposia or

colloquia devoted to recent research on close binaries have been held around the world almost annually At meetings of the General Assembly of the International Astronomical Union this topic has also been discussed in detail at presentations in various commission meetings and also as invited talks by leading astronomers in the field In recent years fundamental changes have taken place in the study of close binaries due to the improvements in observational techniques extension of observations from X ray to radio regions of the electromagnetic spectrum and advances in theoretical studies For more than a decade a group of astronomers at Ege University Observatory has been concentrating on active close binaries with particular emphasis on the behaviour of the light curves of chromospherically active systems Thus we decided to organize an international meeting in Western Anatolia where this part of Turkey had been the cradle for great developments in science during antiquity KUljadasi located only minutes away from Ephesus one of the seven wonders of the world was selected to be the meeting site Close binary systems constitute a very rich source of information about the physical properties of the component stars Some systems are eclipsing variables where periodic recurrences of eclipses are observed as comparatively brief decreases in the total brightness of the binary system Precise methods of photometric observations make it possible to obtain the light variations of these systems because of eclipses and other phenomena

Astrophysics in the Extreme Ultraviolet Stuart Bowyer, Roger F. Malina, 2012-12-06 From the beginning of Space Astronomy the Extreme Ultraviolet band of the spectrum roughly defined as the decade in energy from 90 900 was deemed to be the unobservable ultraviolet Pioneering results from an EUV telescope on the Apollo Soyuz Mission in 1975 forcibly demonstrated that this view was incorrect but it required the all sky surveys of the English Wide Field Camera and the Extreme Ultraviolet Explorer to demonstrate the broad potential of this field Over 700 EUV sources have now been detected Over 150 researchers from 16 countries gathered to share results in this new field at the International Astronomical Union Colloquium No 152 Papers were presented on a wide variety of topics including cool star coronae white dwarf atmospheres and evolution neutron stars the Io torus cataclysmic variable stars active galactic nuclei the interstellar medium winds and atmospheres of early type stars and EUV plasma diagnostics Selected manuscripts from this meeting are provided in these Conference Proceedings

Analysis of the IRAS Low Resolution Spectra Irene Little-Marenin, 1988 Analysis of the IRAS low resolution spectra show that the 8 22 micron spectral range show a variety of emission features The strongest features in spectra of M stars are the 10 and 18 micron silicate emission features In addition a three component feature with peaks at 10 11 and 13 1 micron and a weak broad 9 15 micron feature is present in many M variable stars Most carbon stars show the 11 2 micron SiC emission feature as well as in some cases an unidentified 8 9 micron emission feature The MS S and SC stars show a range of emission features whose peaks range from 10 to 11 2 micron The excess emission above the underlying photospheric continuum in the 8 22 micron region for S Mira variables shows a sharp increase for period greater than about 370 days

Highlights of Astronomy Richard M. West, 2012-12-06 Even the casual reader cannot fail to notice the somewhat uneven presentation of

the contributions contributors to this volume in particular what concerns the style A closer scrutiny will also reveal that whereas the English language is certainly the preferred vehicle for communication in astronomy it is not the mother tongue of all contributors However while editing this volume I have felt that it would be more important to assure a speedy publication than to attempt to achieve a high degree of uniformity which would anyhow be extremely difficult with more than 100 contributing authors When published this book should still be a tool for active research not a museum piece I am grateful to the organizers and editors of the individual sections for having produced their parts within the allotted time and with a high degree of professionalism A special word of thanks goes to my collaborators at the European Southern Observatory Mrs E Volk Mr C Madsen and Mr J Leclercq for technical assistance The Modern 1001 Nights - Inspirational Stories for the New Age - Vol 8 Kem Lai,2024-08-20 The Modern 1001 Nights Inspirational Stories for the New Age weaves together a captivating collection of stories that blend ancient wisdom with contemporary themes As Sheherazade shares her nightly tales readers are transported into a world where courage innovation and compassion shine Each story crafted with modern sensibilities explores themes of perseverance leadership and personal growth From the inspiring journey of a determined athlete to the transformative impact of a visionary inventor these narratives highlight the power of dedication and the importance of community This book invites readers to embrace the lessons of the past while finding inspiration for the future With its rich tapestry of characters and themes The Modern 1001 Nights Inspirational Stories for the New Age offers a profound and engaging reading experience promising to resonate with audiences of all ages *The Stars* Evry L. Schatzman,Francoise Praderie,1993-04-29 Following an introductory chapter on stellar fundamentals the story begins of the lives and deaths of the stars The authors take us on a journey from the sun a comparatively young star to supernovae manifestations of dramatic death On the way the reader advanced undergraduate or beginning postgraduate is presented with such topics as stellar evolution the hydrodynamics of stellar interiors variability and solar and stellar activity This comprehensive but rigorous text building on the theoretical and observational advances of recent years for instance astrophysical theory in the light of Supernova 1987A is required reading for all serious students of astronomy
