lands of little water have long been home to a surprising diversity of aquatic life from fish to insects and mollusks With  
European settlement however water extraction resource exploitation and invasive species set many of these native aquatic  
species on downward spirals In this book conservationists dedicated to these creatures document the history of their work  
the techniques and philosophies that inform it and the challenges and opportunities of the future A precursor to this book  
Battle Against Extinction laid out the scope of the problem and related conservation activities through the late 1980s Since  
then many nascent conservation programs have matured and researchers have developed new technologies improved and  
refined methods and greatly expanded our knowledge of the myriad influences on the ecology and dynamics of these species  
Standing between Life and Extinction brings the story up to date While the future for some species is more secure than thirty  
years ago others are less fortunate Calling attention not only to iconic species like the razorback sucker Gila trout and Devils  
Hole pupfish but also to other fishes and obscure and fascinating invertebrates inhabiting intermittent aquatic habitats this  
book explores the scientific social and political challenges of preserving these aquatic species and their habitats amid an  
increasingly charged political discourse and in desert regions characterized by a growing human population and rapidly
