Snakes of Central and Western Africa Jean-Philippe Chippaux, Kate Jackson, 2019-06-18 The first and only authoritative guide to the snakes of Central and Western Africa Nobody knows exactly how many snake species live in the biodiversity hotspots of Western and Central Africa While field guides abound that make mammals birds and even insects identifiable for residents travelers and scientists half a continent's herpetological richness has remained shrouded in mystery In a region where nearly 30 000 people die from snake bites every year even dire medical necessity has been an insufficient inducement for researchers to take on the daunting task of assembling an authoritative list of extant species let alone a full descriptive record to aid in identification the essential first step to administering an effective antivenin The reptiles of Central Africa particularly are the most poorly studied in the world despite their crucial role in the survival of threatened ecosystems With Snakes of Central and Western Africa Jean Philippe Chippaux and Kate Jackson have created a game changer The result of years of field research and systematic study in the world's leading museums this book compiles for the first time a comprehensive guide to the region's snakes Covering a vast swath of the continent ranging from Mauritania in the northwest to Rwanda in the east and Angola in the south Chippaux and Jackson provide detailed accounts for the more than 200 species of snakes that inhabit the region The first part of the book is devoted to the taxonomic characters used for identifying snakes The authors deal with the evolution and biogeography of African snakes as well as epidemiological and clinical aspects of snakebite The remaining chapters are organized phylogenetically following the latest consensus on evolutionary patterns of major snake lineages in sub Saharan Africa Species identification is facilitated by simple and accessible dichotomous keys and detailed descriptions of morphological characteristics complemented by numerous drawings photos and distribution maps Invaluable information on taxonomy and natural history is also included The book concludes with a comprehensive index and a list of nearly 600 references Snakes of Central and Western Africa illuminates a previously little known part of the natural world provides vital information that could save many lives and will make an excellent addition to any herpetology library

Howard-Williams, A.J. McLachlan, 2012-12-06 Leonard C Beadle In contrast to the more stable oceans inland waters are on the geological time scale short lived and are subject to great fluctuations in chemical composition and physical features Very few lakes and rivers have existed continuously for more than a million years and the life of the majority is to be measured in thousands or less Earth movements erosion and long term climatic changes in the past have caused many of them to appear and disappear No wonder then that most freshwater organisms are especially adapted to great changes and many even to temporary extinction of their environment Recent studies of residual sediments from existing and extinct lakes in tropical Africa have told us much about their age and the past history of their faunas and floras from which we may deduce something about the climate and the conditions in the water in the past The forces that have formed and moulded the African

Great Lakes have been catastrophic in their violence and effects They are not yet finished but the present rate of change is in human terms too slow for direct observation of the ecological effects The large man made lakes are providing very good opportunities for studying the chemical and biological consequences of the initial filling but once filled they are artificially protected against major fluctuations **National Union Catalog** ,1968 Includes entries for maps and atlases *African Journal of Herpetology* ,1998 **The Publishers' Trade List Annual** ,1974 *African Research & Documentation* ,2000
