**The F Language Guide** Wilhelm Gehrke, 2012-12-06 Fortran is currently the world's most powerful numeric language and F is a subset of this F is a programming language which is nearly as powerful as its parent language containing the modern language features of Fortran yet smaller and easier to use debug and teach than Fortran As with his previous Fortran books Wilhelm Gehrke has provided a clear and comprehensive guide to the F language in this book which will be welcomed by practitioners and students alike The F Language Guide will serve as a language reference manual for the novice as well as for the experienced programmer as teaching material for courses in F programming and in programming methodology The guide concentrates on the description of the language as a programmer's tool A representation of the F Syntax using railroad diagrams will be available on the Springer server at <http://www.springer.co.uk>

**Distributed Search by Constrained Agents** Amnon Meisels, 2007-12-20 Distributed search by agents is an important topic of distributed AI and has not been treated thoroughly as such While the scope of work on multi agent systems has grown steadily over the last decade very little of it has spilled into distributed search In contrast the constraints processing community has produced a sizable body of work on distributed constrained search Paradoxically a community that concentrates on search algorithms and heuristics has created a distributed model for agents that cooperate on solving hard search problems Traditionally this field has been named Distributed Constraints Satisfaction and lately also distributed constraints optimization The present book attempts to prompt deeper response from the MAS community and hopefully to give rise to cooperative work on distributed search by agents In order to achieve this high goal the book presents the large body of work on distributed search by constrained agents The presentation emphasizes many aspects of distributed computation that connect naturally to multi agent systems especially measures of performance for distributed search algorithms and the impact of delays in communication Distributed Constraints Satisfaction Problems DisCSPs have been studied over the last decade starting with the pioneering proposal by Makoto Yokoo

18 The first distributed search algorithm for DisCSPs Asynchronous Backtracking ABT was first published in complete format in 1998 64 The first book on Distributed Constraints Satisfaction Problems has appeared as early as 2000 61
