which emerge from the collective behaviour of large ensembles of individuals

recent developments in the field and reassesses topics that have been thought to fit comfortably within a more traditional approach to epistemology including our capacities to know our own minds to reason and to remember by examining the ways in which they might be significantly impacted by one's social environment. Several chapters interrogate the boundaries of what social epistemology is by exploring its application to significant issues outside of philosophy such as psychology, sociology and political theory as well as the ways it intersects with ethics, the philosophies of language and mind, political philosophy, feminist philosophy and critical philosophy of race. Divided into seven sections, this handbook provides a comprehensive coverage of work in this exciting and fertile area of philosophy as it highlights the relevance and importance of social factors to some of the most pressing epistemological questions facing us as agents in the world.
