Flame Hardening Hans Wilhelm Grönegress, 2013-12-11 This book intended for shop use tries to familiarize the reader with the peculiarities of a hardening method which due to its many advantages is now in use many shops A general knowledge of the principles of hardening and heat treating is presumed

Introduction 1 The name of the process Flame hardening is a method derived from the old quench hardening and is used for the surface hardening of heat treatable steels Flame hardening is so named in analogy to flame cutting as the use of a flame is a distinctive feature of this process as opposed to the use of a furnace 2 Characteristics of flame hardening In flame hardening the area to be hardened is heated with a burner of large heat capacity approx 0.5 10 kcal/jhr meter of flame lengths or 50 000 BTU/hr inch of flame length supplied with a mixture of fuel gas and oxygen The hardening temperature is thus reached in so short a time at the surface that a heat jam is created that is more heat is supplied to the surface than can be dissipated to the interior of the workpiece As the quenching takes place immediately after the heating the penetration of the heat to greater depth is prevented and only the outer layer subject to wear is hardened The core of the workpiece remains unaffected by this heat treatment in contrast to the other hardening methods where the entire piece is through heated in a furnace

Electrolytic Surface Hardening of Medium Carbon Steel Islam Bayoumi, 2011-04 Surface hardening is one of heat treatment processes which include a wide variety of techniques Striving at improving the wear resistance of parts without affecting the interior softness and toughness of the part The surface hardening of steel has an advantage over through hardening because it is less expensive low carbon and medium carbon steels can be surface hardened with problems of less distortion and cracking associated with the through hardening of thick sections Electrolytic surface hardening process has been found as a new development in the area of surface heat treatments The book covers the electrolytic surface hardening process using specimens of medium carbon steel AISI 1050 For this

purpose an apparatus has been built to perform the necessary systematic investigations to explore the possibilities and capabilities of this promising surface hardening process **The Case-hardening of Steel** Harry Brearley,1914

Principles of heat treatment of steels Romesh C. Sharma,2003 Heat Treatment Of Steels As An Art To Improve Their Service Performance Has Been Practised Ever Since It Started To Be Used As Tools And Weapons However The Scientific Basis Of Heat Treatment Of Steels Became More Apparent Only In The First Half Of This Century And Still Some Gaps Remain In Its Complete Understanding Earlier Books On Heat Treatment Of Steels Mainly Emphasised The Art And The Empirically Arrived Principles Of Heat Treatment In The Last Few Decades Our Understanding Of Phase Transformations And Mechanical Behaviour Of Steels And Consequently Of Heat Treatment Of Steels Has Considerably Increased In This Book On Principles Of Heat Treatment Of Steels The Emphasis Is On The Scientific Principles Behind The Various Heat Treatment Processes Of Steels Though It Is Expected That The Reader Has Sufficient Background In Phase Transformations And Mechanical Behaviour Of Materials First Few Chapters Review These Topics With Specific Reference To Steels Basic Principles Of Various Heat Treatment Processes Of Steels Including Surface Hardening Processes Are Then Covered In Sufficient Detail To Give A Good Overall Understanding Of These Processes The Detail Engineering Aspects Are However Omitted These Are Easily Available In Various Handbooks On Heat Treatment The Book Also Covers Heat Treatment Of Tool Steels And Cast Irons The Book Has Been Well Written And Can Be Used A Textbook On Heat Treatment For Undergraduate Students It Is Also A Good Reference Book For Teachers And Researchers In This Area And Engineers In The Industry

Laser Surface Hardening of Steels ,1984 Study of the laser hardening response of AISI 01 AISI 4340 carburized AISI 1020 and carburized AISI 9310 steels in various prior heat treatment conditions The laser operating parameter combinations are established to produce maximum hardened case depths without surface melting *Carburizing* Geoffrey Parrish,1999-01-01 Annotation Based on his training in metallurgy and experience in a large British gear manufacturing company Parrish reviews the microstructural features of metal products that have been carbon case hardened and the influence of those features on the more important material properties He is not concerned with the carbonizing process at all He primarily addresses students of engineering and ferrous metallurgy but also stress and design engineers who might want to understand more fully the specifications of the materials they are considering for their designs He wrote the eight articles to summarize the field s literature of the early 1970s for his own convenience but at invitation published them as a series in the Heat Treatment of Metals during 1967 77 and collected them for a first edition of the volume in 1980 Annotation copyrighted by Book News Inc Portland OR **Steel Metallurgy - Volume II** Marco V.
