Distributed Computing for Emerging Smart Networks Imen Jemili, Mohamed Mosbah, 2021-01-02 This book constitutes the refereed proceedings of the Second International Workshop on Distributed Computing for Emerging Smart Networks DiCES N 2020 held in Bizerte Tunisia in December 2020 Due to the COVID 19 pandemic the conference was held online The 8 full papers included in this volume were carefully reviewed and selected from numerous submissions The papers are organized in the following topical sections intelligent transportation systems emerging networking technologies artificial intelligence and internet of things

Smart Business Networks Peter H.M. Vervest, Eric van Heck, Ken Preiss, Louis-Francois Pau, 2005-12-14 Scientists from management and strategy information systems engineering and telecommunications have discussed a novel concept Smart Business Networks They see the future as a developing web of people and organizations bound together in a dynamic and unpredictable way creating smart outcomes from quickly re configuring links between actors The question is What should be done to make the outcomes of such a network smart that is just a little better than that of your competitor More agile with less pain with more return to all the members of the network now and over time The technical answer is to create a business operating system that should run business processes on different organisational platforms Business processes would become portable The end to end management of processes running across many different organizations in many different forms would become possible This book presents you the outcomes of an energizing and new direction in management science

Smart Network Inspired Paradigm and Approaches in IoT Applications Mohamed Elhoseny, Amit Kumar Singh, 2019-07-20

This book gathers high quality research articles and reviews that reflect the latest advances in the smart network inspired paradigm and address current issues in IoT applications as well as other emerging areas. Featuring work from both academic and industry researchers, the book provides a concise overview of the current state of the art and highlights some of the most promising and exciting new ideas and techniques. Accordingly, it offers a valuable resource for senior undergraduate and graduate students, researchers, policymakers, and IT professionals and providers working in areas that call for state of the art networks and IoT applications.

Quantum Computing: Physics, Blockchains, And Deep Learning Smart Networks Melanie Swan, Renato P Dos Santos, Frank Witte, 2020-03-20

Quantum information and contemporary smart network domains are so large and complex as to be beyond the reach of current research approaches. Hence, new theories are needed for their understanding and control. Physics is implicated as smart networks are physical systems comprised of particle many items interacting and reaching criticality and emergence across volumes of macroscopic and microscopic states. Methods are integrated from statistical physics, information theory, and computer science. Statistical neural field theory and the AdS/CFT correspondence are employed to derive a smart network field theory (SNFT) and a smart network quantum field theory (SNQFT) for the orchestration of smart network systems. Specifically, a smart network field theory (conventional or quantum) is a field theory for the organization of particle many systems from a characterization, control, criticality, and novelty emergence perspective. This book provides insight as to how quantum information science as a paradigm shift in computing may influence other high impact digital transformation technologies such as blockchain and machine learning. Smart networks refer to the idea that the internet is no longer simply a communications network but rather a computing platform. The trajectory is that of communications networks becoming computing networks with self-executing code and perhaps ultimately quantum computing networks. Smart network technologies are conceived as autonomous self-operating computing networks. This includes blockchain economies, deep learning neural networks, autonomous supply chains, self-piloting driving fleets, unmanned aerial vehicles, industrial robotics, cloudminds, real time bidding for advertising, high frequency trading networks, smart city IoT sensors, and the quantum internet.
