Smith,2013-10-28 This three volume encyclopedia on the history of American food and beverages serves as an ideal companion resource for social studies and American history courses covering topics ranging from early American Indian foods to mandatory nutrition information at fast food restaurants The expression you are what you eat certainly applies to Americans not just in terms of our physical health but also in the myriad ways that our taste preferences eating habits and food culture are intrinsically tied to our society and history This standout reference work comprises two volumes containing more than 600 alphabetically arranged historical entries on

The entries in this set provide information that will transform any American history research project into an engaging learning experience. Examples include explanations of how tuna fish became a staple food product for Americans, how the canning industry emerged from the Civil War, the difference between Americans and people of other countries in terms of what percentage of their income is spent on food and beverages, and how taxation on beverages like tea, rum, and whisky set off important political rebellions in U.S. history.

Ecocriticism and the Future of Southern Studies
Zackary Vernon, 2019-08-14

As the planet faces ever-worsening disruptions to global ecosystems—carbon and chemical emissions, depletions of the ozone layer, the loss of biodiversity, rising sea levels, air toxification, and worsening floods and droughts—scholars across academia must examine the cultural effects of this increasingly postnatural world. That task proves especially vital for southern studies, given how often the U.S. South serves as a site for large-scale damming initiatives like the TVA, disasters on the scale of Hurricane Katrina and the Deepwater Horizon spill, and the extraction of coal, oil, and natural gas. *Ecocriticism and the Future of Southern Studies* is the first book-length collection of scholarship that applies interdisciplinary environmental humanities research to cultural analyses of the U.S. South. Sixteen essays examine novels, nature writing, films, television, and music that address a broad range of ecological topics related to the region, including climate change, manmade and natural environments, the petroleum industry, food cultures, waterways, natural and human-induced disasters, waste management, and the Anthropocene. Edited by Zackary Vernon, this volume demonstrates how the greening of southern studies in tandem with the southernization of environmental studies can catalyze alternative ways of understanding the connections between regional and global cultures and landscapes. By addressing ecological issues central to life throughout the South, *Ecocriticism and the Future of Southern Studies* considers the confluence between region and environment while also illustrating the growing need to see environmental issues as matters of social justice.
