Smokestack Diplomacy:

Smokestack Diplomacy Robert G. Darst, 2001-01-02 Many environmental problems cross national boundaries and can be addressed only through international cooperation In this book Robert Darst examines transnational efforts to promote environmental protection in the USSR and in five of its successor states Russia Ukraine and the Baltic republics of Estonia Latvia and Lithuania from the late 1960s to the present The core of the book is a comparative study of three key issues nuclear power safety transboundary air pollution and Baltic Sea pollution Although expectations were high that the end of the Cold War and the breakup of the Soviet Union would lead to increased East West environmental cooperation the opposite has been true Russia and the other successor states have generally agreed to address such problems only when paid to do so Darst finds that post Cold War environmental cooperation has been most successful when there is an overlap between the environmental and economic interests of the successor states and those of their Western neighbors and when the foundation for cooperation was laid during the Cold War period The book is based on extensive original field research including interviews with diplomats government officials scientists and environmental activists in the successor states and Western Europe Its findings underscore the importance of the domestic and international political context in which international environmental policy making occurs It also deepens our understanding of the opportunities and dangers of positive inducements as a tool of international environmental policy

The Nature of Soviet Power Andy Bruno, 2016-04-11 During the twentieth century the Soviet Union turned the Kola Peninsula in the northwest corner of the country into one of the most populated industrialized militarized and polluted parts of the Arctic This transformation suggests above all that environmental relations fundamentally shaped the Soviet experience Interactions with the natural world both enabled

industrial livelihoods and curtailed socialist promises Nature itself was a participant in the communist project Taking a long term comparative perspective The Nature of Soviet Power sees Soviet environmental history as part of the global pursuit for unending economic growth among modern states This in depth exploration of railroad construction the mining and processing of phosphorus rich apatite reindeer herding nickel and copper smelting and energy production in the region examines Soviet cultural perceptions of nature plans for development lived experiences and modifications to the physical world While Soviet power remade nature nature also remade Soviet power *Chernobyl* Serhii Plokhy, 2018-05-15 A Chernobyl survivor and the New York Times bestselling author of The Gates of Europe mercilessly chronicles the absurdities of the Soviet system in this vividly empathetic account of the worst nuclear accident in history Wall Street Journal On the morning of April 26 1986 Europe witnessed the worst nuclear disaster in history the explosion of a reactor at the Chernobyl Nuclear Power Plant in Soviet Ukraine Dozens died of radiation poisoning fallout contaminated half the continent and thousands fell ill In Chernobyl Serhii Plokhy draws on new sources to tell the dramatic stories of the firefighters scientists and soldiers who heroically extinguished the nuclear inferno He lays bare the flaws of the Soviet nuclear industry tracing the disaster to the authoritarian character of the Communist party rule the regime's control over scientific information and its emphasis on economic development over all else Today the risk of another Chernobyl looms in the mismanagement of nuclear power in the developing world A moving and definitive account Chernobyl is also an urgent call to action **The Power of Systems** Eglė Rindzevičiūtė, 2016-12-15 In The Power of Systems Eglė Rindzevičiūtė introduces readers to one of the best kept secrets of the Cold War the International Institute of Applied Systems Analysis IIASA an international think tank established by the US and USSR to advance scientific collaboration From 1972 until the late 1980s IIASA was one of the very few permanent platforms where policy scientists from both sides of the Cold War could work together to articulate and solve world problems A rare zone of freedom communication and negotiation East West scientists co produced computer simulations of the long term world future using global modeling to explore the possible effects of climate change and nuclear winter Their concern with global issues also became a vehicle for transformation inside the Soviet Union The Power of Systems explores how computer modeling cybernetics and the systems approach challenged Soviet governance by undermining the linear notions of control on which Soviet governance was based and creating new objects and techniques of government *Animal Industries* Taina Syrjämaa, Marja Jalava, Taija Kaarlenkaski, Otto Latva, Eeva Nikkilä, Tuomas Räsänen, 2024-04-01 This book examines an extremely topical phenomenon the massive industrial exploitation of animals from a previously neglected perspective It explores the history and development of animal industries in Nordic countries from their establishment in the late nineteenth century to the present day These countries are often considered to be progressive and advanced in animal protection but consumption practices in this area are actually excessive in relation to planetary resources and are among the most unsustainable on a global scale If we want to understand current problems it is

essential to be aware of long term changes and continuities as well as the diversity of animals that have been exploited The purpose of this book is to explain these changes and provide new knowledge for scholars in human animal studies decisionmakers and the general public Global Environmental Assessments Ronald Bruce Mitchell,2006 A comparative analysis of global environmental assessments shows the importance of policy salience scientific credibility and social and political legitimacy in determining the influence of scientific assessments on global environmental policy **Water in Social Imagination** ,2017-01-05 Water in Social Imagination considers how human communities have known imagined and shaped water and how water has shaped both material culture and the imagination Essays from diverse perspectives offer histories of water at different scales from community water wells and sacred springs to Siberian rivers and the regulated space of the Baltic Sea From early modernization through Soviet style technological optimism to contemporary environmentalism water s ideological uses are multiple With sustained attention not just to state policy and the technologies of high modernity but to creative resistance to utilitarian imaginations these essays insist on fluidities of meaning ambiguities that derive both from water s physical mutability and from its dual nature as life necessity and agent of destruction

Pollution and Atmosphere in Post-Soviet Russia Lars Rowe,2020-12-10 This study addresses the many initiatives to decrease industrial pollution emitting from the Pechenganikel plant in the northwestern corner of Russia during the final years of the Soviet Union and examines the wider implications for the state of pollution control in the Arctic today By examining the efforts of Soviet industry and government agencies Finnish and Swedish officials and Norwegian environmental authorities to curb industrial pollution in the region this book offers an environmental history of the Arctic as well as a transnational geopolitical history
