Changes in Cigarette-related Disease Risks and Their Implication for Prevention and Control, 1997 *The Tobacco Epidemic* C. T. Bolliger, K. O. Fagerström, F.J.F. Herth, 1997-10-20 Today it is a well established fact that cigarette smoking is fundamentally a form of addiction to the drug nicotine However this does not mean that smoking can entirely be explained in terms of pharmacological factors as with any drug addiction social economic personal and political influences all play an important part in determining patterns of prevalence and cessation This publication provides a comprehensive up to date review of tobacco smoking Written by internationally acknowledged experts the 15 chapters of the book cover the history economics epidemiology and psychology of tobacco use The medical consequences of both active and passive smoking are discussed in detail and the pharmacological and behavioral aspects of nicotine dependence are highlighted Several chapters focus on smoking cessation examining patterns and predictors of cessation in the general population and the role of GPs nurses and pharmacists and evaluating nicotine replacement therapy and other drugs as well as the role of smokeless tobacco Measures to prevent smoking such as smoke free environments advertising bans and price increases are also considered Finally recommendations are given to change legislation concerning tobacco products in order to most effectively reduce the harm associated with nicotine use This book is a must for anyone in the medical profession interested in smoking related issues Due to its easy readability and topicality it will also appeal to nonmedical readers A Karger Publishing Highlights 1890 2015 title

How Tobacco Smoke Causes Disease United States. Public Health Service. Office of the Surgeon General, 2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies Mechanisms of disease are important because they may provide

plausibility which is one of the guideline criteria for assessing evidence on causation This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke This evidence is relevant to understanding how smoking causes disease to identifying those who may be particularly susceptible and to assessing the potential risks of tobacco products
