Steam Explosion Techniques Fundamentals And Industrial Applications:

Steam Explosion Techniques Bonaventura Focher, Annamaria Marzetti, Vittorio Crescenzi, 1991 Steam explosion is a rapidly developing technique for the fractionation and modification of lignocellulosics and for the extraction of industrial polysaccharides This book is a primary integrated presentation of the fundamental and technological aspects of this process and provides an exhaustive discussion of its prospects for the future The main topics concern the kinetic and engineering aspects as well as the structure modifications of the substrates induced by the steam explosion process Applications in the pulping and textile industries in the bioconversion of wood and agricultural biomass and in polysaccharide extraction are widely discussed Potential developments of this technique in the activation of lignocellulosics for dissolving and the production of new textile fibers and films are also considered

International Workshop on Steam Explosion Technique, 1910 **Hydrothermal Processing in Biorefineries** Héctor A. Ruiz, Mette Hedegaard Thomsen, Heather L. Trajano, 2017-05-22 The biorefinery integration of processes and technologies for biomass conversion demands efficient utilization of all components Hydrothermal processing is a potential clean technology to convert raw materials such as lignocellulosic and aquatic biomass into bioenergy and high added value compounds This book aims to show fundamental concepts and key technological developments that enabled industrial application of hydrothermal processing The scope of this book is primarily for scientists working in the biorefinery field as well as engineers from industry and potential investors in biofuels Therefore the information in this book will provide an overview of this technology applied to lignocellulosic materials and aquatic biomass and especially new knowledge Critically this book brings together experts in the application of hydrothermal processes on lignocellulosic and aquatic biomass

Handbook of Polymer Nanocomposites. Processing, Performance and Application Jitendra K. Pandey, Hitoshi Takagi, Antonio Norio Nakagaito, Hyun-Joong Kim, 2014-12-01 Volume C forms one volume of a Handbook about Polymer Nanocomposites Volume C deals with Polymer nano composites of cellulose nano particles The preparation architecture characterisation properties and application of polymer nanocomposites are discussed within some 27 chapters Each chapter has been authored by experts in the respective field

Lignocellulosic Biorefineries Jean-Luc Wertz, Olivier Bédué, 2013-06-27 Written with a diverse audience in mind this book describes the current status development and future prospects for the critical technology of second generation biorefineries specifically with a focus on lignocellulosic materials as feedstock It provides an overview of the issues behind this technological transition and it provides in depth

Lignin and Lignans as Renewable Raw Materials Francisco G. Calvo-Flores, José A. Dobado, Joaquín Isac-García, Francisco J. Martín-Martínez, 2015-12-14 As naturally occurring and abundant sources of non fossil carbon lignin and lignans offer exciting possibilities as a source of commercially valuable products moving away from petrochemical based feedstocks in favour of renewable raw materials Lignin can be used directly in fields such as agriculture livestock soil rehabilitation bioremediation and the polymer industry or it can be chemically

modified for the fabrication of specialty and high value chemicals such as resins adhesives fuels and greases Lignin and Lignans as Renewable Raw Materials presents a multidisciplinary overview of the state of the art and future prospects of lignin and lignans The book discusses the origin structure function and applications of both types of compounds describing the main resources and values of these products as carbon raw materials Topics covered include Structure and physicochemical properties Lignin detection methods Biosynthesis of lignin Isolation methods Characterization and modification of lignins Applications of modified and unmodified lignins Lignans structure chemical and biological properties Future perspectives This book is a comprehensive resource for researchers scientists and engineers in academia and industry working on new possibilities for the application of renewable raw materials For more information on the Wiley Series in Renewable Resources visit www.wiley.com/go/rrs

Introduction to Renewable Biomaterials Ali S. Ayoub, Lucia A. Lucia, 2025-02-25 Covers the entire evolutionary spectrum of biomass from its genetic modification and harvesting to conversion technologies life cycle analysis and its value to the current global economy This original textbook introduces readers to biomass a renewable resource derived from forest agriculture and organic based materials which has attracted significant attention as a sustainable alternative to petrochemicals for large scale production of fuels materials and chemicals The current renaissance in the manipulation and uses of biomass has been so abrupt and focused that very few educational textbooks actually cover these topics to any great extent That s why this interdisciplinary text is a welcome resource for those seeking a better understanding of this new discipline It combines the underpinning science of biomass with technology applications and sustainability considerations to provide a broad focus to its readers Introduction to Renewable Biomaterials First Principles and Concepts consists of eight chapters on the following topics fundamental biochemical principles and methodologies controlling plant growth and silviculture fundamental science and engineering considerations critical considerations and strategies for harvesting first principles of pretreatment conversion technologies characterization methods and techniques and life cycle analysis Each chapter includes a glossary of terms two to three problem sets and boxes to highlight novel discoveries and instruments Chapters also offer questions for further consideration and suggestions for further reading Developed from a successful USDA funded course run by a partnership of three US universities BioSUCCEED BioProducts Sustainability a University Cooperative Center for Excellence in Education Covers the entire evolutionary spectrum of biomass from genetic modification to life cycle analysis Presents the key chemistry biology technology and sustainability aspects of biomaterials Edited by a highly regarded academic team with extensive research and teaching experience in the field Introduction to Renewable Biomaterials First Principles and Concepts is an ideal text for advanced academics and industry professionals involved with biomass and renewable resources bioenergy biorefining biotechnology materials science sustainable chemistry chemical engineering crop science and technology agriculture

Handbook of Textile Fibre Structure Stephen Eichhorn, J. W. S. Hearle, M Jaffe, T Kikutani, 2009-10-26 Due to their

complexity and diversity understanding the structure of textile fibres is of key importance This authoritative two volume collection provides a comprehensive review of the structure of an extensive range of textile fibres Volume 2 begins by reviewing natural fibres such as cellulosic cotton protein wool and silk fibres Part two considers regenerated cellulosic protein alginate chitin and chitosan fibres The final part of the book discusses inorganic fibres such as glass carbon and ceramic fibres as well as specialist fibres such as thermally and chemically resistant fibres optical and hollow fibres Chapters review how fibre structure contributes to key mechanical properties A companion volume reviews the structure of manufactured polymer fibres Edited by leading authorities on the subject and with a team of international authors the two volumes of the Handbook of textile fibre structure is an essential reference for textile technologists fibre scientists textile engineers and those in academia Discusses how fibre structure contributes to key mechanical properties Reviews natural fibres such as cellulosic cotton and silk fibres and considers various regenerated fibres Examines inorganic fibres including glass and carbon as well as specialist fibres such as chemically resistant and optical fibres

Wood Composites J. Paulo Davim, Alfredo Aguilera, 2017-09-11 Wood composites as part of wood engineering materials has been reaching a constant developing trend being used on a wide range of applications and becoming worldwide as a very promising alternate material face to traditional building materials such as concrete metal and plastics In this part of the series are treated aspects among which advances functionalities in laminates the activation of natural fibres the natural matrix and others industrials manufacturing research advances for wood material as composite

1st World Conference on Biomass for Energy and Industry Spyros Kyritsis, 2001 The 1st World Conference and Technology Exhibition on Biomass for Energy and Industry held in Sevilla in June 2000 brought together for the first time the traditional European Conference on Biomass for Energy and Industry and the Biomass Conference of the Americas thus creating the largest and most outstanding event in the worldwide biomass sector The conference elaborated innovative global strategies projects and efficient practice rules for energy and the environment at a key stage in the industry s development New concepts and projects were highlighted to increase the social and political awareness for a change in worldwide resource consumption and to promote economically socially and environmentally sustainable development for the next millennium In 2 volumes the Proceedings include some 470 papers essential to an understanding of current thinking practice research and global developments in the biomass sector a vital reference source for researchers manufacturers and policy makers involved or interested in the use of biomass for energy and industry
