Small Molecular Immunomodifiers of Microbial Origin, 1980 *Small Molecular Immunomodifiers of Microbial Origin*
Hamao Umezawa, 2014-05-09 *Small Molecular Immunomodifiers of Microbial Origin* Fundamental and Clinical Studies of Bestatin focuses on the results of experimental and clinical studies suggesting that bestatin and small molecular weight immunity enhancing agents can contribute to the treatment of cancer and resistant infections The selection first offers information on the screening discoveries and genetics of microbial secondary metabolites and activity of bestatin Topics include the effect of bestatin on colony formation of murine bone marrow progenitor cells in vitro antitumor effect of bestatin on murine transplantable tumors and structures and properties of bestatin amastatin forphenicine and esterastin The text then examines the effects of bestatin on DNA and RNA metabolism in T cells and levamisole and bestatin in immunodeficient aged mice The text examines the influence of bestatin on the lymphoid system in humans natural killer activity and bone marrow The preliminary phase I study of bestatin in lung cancer cases and malignant skin tumors are discussed Topics include dosage schedule clinical findings and changes in immunological parameters The selection is a vital reference for readers interested in the applications of bestatin in the treatment of cancer and resistant infections

ImmunoPharmaceuticals Edward S. Kimball, 1995-11-27 Written by a leading researcher in immunology
ImmunoPharmaceuticals specifically focuses on immunologically active drugs recently tested for clinical activity or recently approved for medical use Each chapter focuses on a single drug or class of drugs and discusses data from basic and preclinical research concerning mechanisms of action Preclinical models are compared with clinical findings to allow the reader to evaluate the predictive value of those models Featured drugs are being studied for therapy of cancer arthritic disease autoimmune disease immunodeficiency disease transplantation and determination of sepsis Overviews of the retinoids in cancer therapy and preclinical studies on flavonoids are featured Natural Immunity, Cancer and Biological Response Modification E. Lotzová, R. B. Hebermann, 1986-11-24 Biochemistry of Peptide Antibiotics Horst Kleinkauf, Hans von Döhren, 2019-07-22 No detailed description available for Biochemistry of Peptide Antibiotics *Screening for Biological Response Modifiers: Methods and Rationale* James E. Talmadge, Isaiah J. Fidler, R.K. Oldham, 2012-12-06 The observation in the 1950s that nitrogen mustard and other toxic chemicals could induce antitumor responses in patients with refractory lymphoma initiated a massive search for active chemotherapeutic agents The initial observations stimulated a search for new chemotherapeutic agents which might have increased antitumor activity with less toxicity for normal tissues To aid in the search for these new chemicals and to attempt to distinguish among the many toxic chemicals which might be candidates for clinical studies the National Cancer Institute the pharmaceutical industry and the cancer research laboratories of most Western nations developed systems for screening drugs for antitumor activity Perhaps the most extensive screening program was established by the National Cancer Institute 1 This screening program has evolved over the last two decades an

evolution which has been repeatedly reviewed 2 5 Various screening programs in use have examined over 500 000 compounds as potential anticancer agents From these there are now approximately forty anticancer drugs in clinical use The utility of these compounds and their toxicities have been reviewed on many occasions It is now apparent that more active and less toxic anticancer drugs are needed It is also clear that the current screening programs are identifying compounds with similar levels of activity and with continuing moderate to severe toxicity 6

Aminopeptidases in Biology and Disease

Nigel M. Hooper, Uwe Lendeckel, 2012-12-06 Aminopeptidases in Biology and Disease provides a comprehensive review of the emerging role of aminopeptidases in a range of biological processes and disease situations Processes as diverse as angiogenesis antigen presentation neuropeptide and hormone processing pregnancy and reproduction protein turnover memory inflammation tumour growth cancer and metastasis blood pressure and hypertension all critically involve one or more aminopeptidases The individual chapters have been written by experts in the field who have provided detailed accounts of the central roles played by various aminopeptidases in biology and disease

Experimental Hematology Today—1989

Norbert C. Gorin, Luc Douay, 2012-12-06 Experimental Hematology Today 1989 comprises selected papers presented at the 18th Annual Meeting of the International Society for Experimental Hematology July 16 20 1989 Paris France Four major areas of research are explored present aspects of stem cell transplantation control of hemopoiesis hemopoiesis in malignancies and gene transfer The role of autologous bone marrow transplantation in acute leukemia and in Hodgkin lymphoma properties of the murine interleukin 3 receptor effects of Ubenimex on proliferation and differentiation of human bone marrow cells and leukemic cell lines immune system stimulation for the therapy of advanced stage neuroblastoma and retro viral gene transfer of human adenosine deaminase into hematopoietic cells are some of the topics considered BUCHH NDLERTEXT E Selected papers from the 18th Annual Meeting of the International Society for Experimental Hematology The proceedings are published annually and report on the latest experimental and clinical research

Marine Biochemistry

Se-Kwon Kim, 2022-10-12 This book provides the latest comprehensive methods for isolation and other novel techniques for marine product development Furthermore this book offers knowledge on the biological medical and industrial applications of marine derived medicinal food substances There has been a tremendous increase in the products derived from marine organisms for commercial application in industries every year Functional foods of medicinal value are particularly in demand as new technology allows the stabilization of natural ingredients and their availability in pure forms to solve various human diseases Marine flora and fauna have essential elements and trace minerals that nurture various hormones produced in the endocrine system to regulate the respective metabolisms thereby providing a safe and healthy life to humans The overall presentation and clear demarcation of the contents by worldwide contributions is a novel entry point into the market of medicinal foods from the sea The exploration of marine habitats for novel materials are discussed throughout the book The exploration and exploitation of the biochemistry of sea flora and fauna are limited and this book extends the research

possibilities into numerous marine habitats Various approaches for extracting and applying the flora and fauna are discussed This book will be of value to researchers marine biotechnologists and medical practitioners due to the vast information as well as industrial and medical applications of marine substances all in one place

Structure-Activity Relationships of Anti-Tumour Agents D.N. Reinhoudt,T.A. Connors,H.M. Pinedo,K.W. van de Poll,2012-12-06 The Workshop series of the Koningin Wilhelmina Fonds is a feature of the interest of this Foundation to promote research and education in the field of cancer aiming to improve prognosis of the cancer patient For almost a century surgery has now been the main treatment modality for the cancer patient During the past 50 years radiation therapy has developed as a second important modality of treatment However neither of the two modalities are able to cure the majority of cancer patients as the disease is so often metastasized at presentation Cancer chemotherapy is a modality which does have the potential to cure patients with this advanced stage of disease In recent years the three modalities have been combined more and more and here is one of the reasons why the perspectives for the cancer patient have improved so much In addition certain types of cancers such as testicular carcinoma childhood tumors choriocarcinoma non Hodgkin lymphomas and others can now indeed often be cured by chemotherapy alone even if the disease is advanced The combination of drugs and the use of new drugs have greatly contributed to this development There are two main groups of new drugs analogs and new structures A great number of analogs of conventional structures have been developed during the past ten years A typical example of this group is adriamycin which is an analog of daunomycin
