The Quality of the Archaeological Record Charles Perreault, 2019-09-16 Paleobiology struggled for decades to influence our understanding of evolution and the history of life because it was stymied by a focus on microevolution and an incredibly patchy fossil record But in the 1970s the field took a radical turn as paleobiologists began to investigate processes that could only be recognized in the fossil record across larger scales of time and space That turn led to a new wave of macroevolutionary investigations novel insights into the evolution of species and a growing prominence for the field among the biological sciences In *The Quality of the Archaeological Record* Charles Perreault shows that archaeology not only faces a parallel problem but may also find a model in the rise of paleobiology for a shift in the science and theory of the field To get there he proposes a more macroscale approach to making sense of the archaeological record an approach that reveals patterns and processes not visible within the span of a human lifetime but rather across an observation window thousands of years long and thousands of kilometers wide Just as with the fossil record the archaeological record has the scope necessary to detect macroscale cultural phenomena because it can provide samples that are large enough to cancel out the noise generated by micro scale events By recalibrating their research to the quality of the archaeological record and developing a true macroarchaeology program Perreault argues archaeologists can finally unleash the full contributive value of their discipline

Rock, Bone, and Ruin Adrian Currie, 2024-05-21 An argument that we should be optimistic about the capacity of methodologically omnivorous geologists paleontologists and archaeologists to uncover truths about the deep past The historical sciences geology paleontology and archaeology have made extraordinary progress in advancing our understanding of the deep past How has this been possible given that the evidence they have to work with offers mere traces of the past In *Rock Bone and Ruin* Adrian Currie explains that these scientists are methodological omnivores with a variety of strategies and techniques at their disposal and that this gives us every reason to be optimistic

about their capacity to uncover truths about prehistory Creative and opportunistic paleontologists for example discovered and described a new species of prehistoric duck billed platypus from a single fossilized tooth Examining the complex reasoning processes of historical science Currie also considers philosophical and scientific reflection on the relationship between past and present the nature of evidence contingency and scientific progress Currie draws on varied examples from across the historical sciences from Mayan ritual sacrifice to giant Mesozoic fleas to Mars s mysterious watery past to develop an account of the nature of and resources available to historical science He presents two major case studies the emerging explanation of sauropod size and the snowball earth hypothesis that accounts for signs of glaciation in Neoproterozoic tropics He develops the Ripple Model of Evidence to analyze unlucky circumstances in scientific investigation examines and refutes arguments for pessimism about the capacity of the historical sciences defending the role of analogy and arguing that simulations have an experiment like function Currie argues for a creative open ended approach empirically grounded speculation

Gibbs, Jr, Herbert L. Colston, 2012-04-16

Interpreting Figurative Meaning critically evaluates the recent empirical work from psycholinguistics and neuroscience examining the successes and difficulties associated with interpreting figurative language There is now a huge often contradictory literature on how people understand figures of speech Gibbs and Colston argue that there may not be a single theory or model that adequately explains both the processes and products of figurative meaning experience Experimental research may ultimately be unable to simply adjudicate between current models in psychology linguistics and philosophy of how figurative meaning is interpreted Alternatively the authors advance a broad theoretical framework motivated by ideas from dynamical systems theory that describes the multiple interacting influences which shape people s experiences of figurative meaning in discourse This book details past research and theory offers a critical assessment of this work and sets the stage for a new vision of figurative experience in human life Agriculture Decisions; United States. Department of

Agriculture, 1985 Up to 1988 the December issue contains a cumulative list of decisions reported for the year by act docket numbers arranged in consecutive order and cumulative subject index by act **Considered Judgment** Catherine Z. Elgin, 1999-02-01 Philosophy long sought to set knowledge on a firm foundation through derivation of indubitable truths by infallible rules For want of such truths and rules the enterprise foundered Nevertheless foundationalism s heirs continue their forbears quest seeking security against epistemic misfortune while their detractors typically espouse unbridled coherentism or facile relativism Maintaining that neither stance is tenable Catherine Elgin devises a via media between the absolute and the arbitrary reconceiving the nature goals and methods of epistemology In **Considered Judgment** she argues

for a reconception that takes reflective equilibrium as the standard of rational acceptability A system of thought is in reflective equilibrium when its components are reasonable in light of one another and the account they comprise is reasonable in light of our antecedent convictions about the subject it concerns Many epistemologists now concede that certainty is a chimerical goal But they continue to accept the traditional conception of epistemology s problematic Elgin suggests that in abandoning the quest for certainty we gain opportunities for a broader epistemological purview one that comprehends the arts and does justice to the sciences She contends that metaphor fiction emotion and exemplification often advance understanding in science as well as in art The range of epistemology is broader and more variegated than is usually recognized Tenable systems of thought are neither absolute nor arbitrary Although they afford no guarantees they are good in the way of belief

The Archaeology of Childhood Güner Coşkun, 2015-11-16 Children existed in ancient times as active participants in the societies in which they lived and the cultures they belonged to Despite their various roles and in spite of the demographic composition of ancient societies where children comprised a large percentage of the population children are almost completely missing in many current archaeological discourses To remedy this The Archaeology of Childhood aims to instigate interdisciplinary dialogues between archaeologists and other disciplines on the notion of childhood and children and to develop theoretical and methodological approaches to analyze the archaeological record in order to explore and understand children and their role in the formation of past cultures Contributors consider how the notion of childhood can be expressed in artifacts and material records and examine how childhood is described in literary and historical sources of people from different regions and cultures While we may never be able to reconstruct every last aspect of what childhood was like in the past this volume argues that we can certainly bring children back into archaeological thinking and research and correct many erroneous and gender biased interpretations

Making Prehistory Derek Turner, 2007-07-05 Scientists often make surprising claims about things that no one can observe In physics chemistry and molecular biology scientists can at least experiment on those unobservable entities but what about researchers in fields such as paleobiology and geology who study prehistory where no such experimentation is possible Do scientists discover facts about the distant past or do they in some sense make prehistory In this book Derek Turner argues that this problem has surprising and important consequences for the scientific realism debate His discussion covers some of the main positions in philosophy of science realism social constructivism empiricism and the natural ontological attitude and shows how they relate to issues in paleobiology and geology His original and thought provoking book will be of wide interest to philosophers and scientists alike

Censored 2014 Mickey Huff, Andy Lee Roth, Project Censored, 2013-10-08 Truthout s Progressive Pick of the Week Ralph Nader s 10 Books to Provoke Conversation in 2014 Every year since 1976 Project Censored our nation s oldest news monitoring group a

university wide project at Sonoma State University founded by Carl Jensen directed for many years by Peter Phillips and now under the leadership of Mickey Huff has produced a Top 25 list of underreported news stories and a book Censored dedicated to the stories that ought to be top features on the nightly news but that are missing because of media bias and self censorship Seven Stories Press has been publishing this yearbook since 1994 featuring the top stories listed democratically in order of importance according to an international panel of judges Beyond the Top 25 stories additional chapters delve further into timely media topics The Censored News and Media Analysis section provides annual updates on Junk Food News and News Abuse Censored Deja Vu signs of hope in the alternative and news media and the state of media bias and alternative coverage around the world In the Truth Emergency section scholars and journalists take a critical look at the US NATO military industrial media empire And in the Project Censored International section the meaning of media democracy worldwide is explored in close association with Project Censored affiliates in universities and at media organizations all over the world A perennial favorite of booksellers teachers and readers everywhere Censored is one of the strongest life signs of our current collective desire to get the news we citizens need despite what Big Media tells us *Social Inquiry and Bayesian Inference* Tasha Fairfield, Andrew E. Charman, 2022-08-04 Provides guidance for Bayesian updating in case study process tracing and comparative research in order to refine intuition and improve inferences from qualitative evidence Causal Mechanisms and Social Change Nicolò Bellanca, 2025-09-30 In a world where social complexity defies linear explanation this book offers a groundbreaking methodology for understanding how and why societies transform At its core is a systematic repertoire of 48 causal mechanisms from individual psychology to institutional dynamics providing powerful analytical tools for decoding social change This interdisciplinary framework transcends traditional boundaries integrating insights from sociology political science economics philosophy and history into a unified language for the social sciences Moving beyond abstract theory Bellanca demonstrates how to identify sufficient causes the decisive factors that when present guarantee specific social outcomes The book progresses from individual mechanisms through conceptual frameworks to middle range theories offering both rigorous analysis and practical applications Whether examining the rise of populism institutional collapse or collective mobilization these tools reveal the hidden patterns driving social transformation Essential for scholars policymakers and practitioners this work provides not just understanding but actionable insights for those seeking to navigate and influence our rapidly changing world An Engineer in the Courtroom William J Lux, 1995-07-01 Engineers may become involved in litigation for various reasons Some common examples include product liability and accident investigation cases The information and suggestions included in An Engineer in the Courtroom will enable engineers to do a proper and professional job when dealing with matters of litigation in and out of the courtroom Chapters Cover Introduction The Nature of Accidents Why Go to Court Avoiding Litigation The Litigation Process Engineers and Engineering Information How the Engineer Can Help the Attorney The Discovery Process The Deposition The Trial Questions Accident Reconstruction

Definitions and Techniques Employed by Attorneys War Stories Tips for the Engineer Involved in Litigation An interesting informative must read book for engineers involved in product design consulting or accident investigation and an ideal reference for lawyers to have on hand to give to engineers serving as expert witnesses **The Language of Fraud Cases** Roger W. Shuy, 2016 The Language of Fraud Cases describes eight court cases that Roger W Shuy consulted on and demonstrates the role of linguistic analysis in defining fraudulent language in the context of law **Greenhouse Warming and Nuclear Hazards** Peter Fong, 2005 This book is a rebuttal of the common belief that grave environmental consequences are associated with the issues of global warming and nuclear hazards Firstly it is argued that after 25 years of research no one has actually found evidence for greenhouse warming Instead the heat has caused the evaporation of ocean water to increase cloud coverage reflecting more sunlight away cooling down the earth and nullifying the effects of greenhouse warming The author describes this revolution in climatology through new scientific discoveries that solve the longstanding mystery of the ice ages and explain the enigma of the missing greenhouse heat The solution of the ice age problem is a far most important scientific accomplishment In the second part of the book the author argues that the effects of low level radiation can be beneficial rather than damaging Evidence is presented proving that low level radiation in the US from both natural sources and human activities such as nuclear bombs tests actually reduces death rates from cancer and other diseases and increases longevity In the Indian State of Kerala life span has been shown to increase 10 5 years due to the natural radiation from thorium mines The book proposes that primitive life forms must have developed immune systems to counter the harmful effects of natural radioactivity and that low level radiation from nuclear waste may one day be transformed from trash to treasure Nature has always been kind to humans But our self aggrandizing species has mistaken blessings for disasters and spoiled the otherwise splendid 20th century
